

Balancing and Settlement Code

BSC PROCEDURE

[Housekeeping]

BSCP533 – Appendix A: PARMS Data Provider File Formats

Please note the changes proposed by CP1325 'Removal of Obsolete PARMS Serials' (approved by SVG for November 2010 implementation) have been accepted in this conformed version to prevent corruption.

All the approved CP1325 redline text can be found [here](#).

Version 14.1

Date:

[Housekeeping]BSCP533 Appendix A**Relating to****[Housekeeping]PARMS Data Provider File Formats**

1. Reference is made to the Balancing and Settlement Code and in particular, to the definition of “BSC Procedure” In Section X, Annex X-1 thereof.
2. [Housekeeping]This is BSCP533 Appendix A Version 14.1 relating to PARMS Data Provider File Formats.
3. This BSC Procedure is effective from .
4. This BSC Procedure has been approved by the Panel.

1. INTRODUCTION

1.1 Purpose

The purpose of this document is to specify the file format specification associated with the information to be submitted to the Performance Assurance Reporting and Monitoring System (PARMS) which monitors Market Participants' performance. This is intended to provide guidance for Data Providers to assist them in the development of their systems.

1.2 PARMS Data

1.2.1 PARMS Data: General Description

PARMS Data consists of data pertaining to the performance of specified market Participants and is provided via a pre-determined series of files by agreed Data Providers (SMRAs, the SVAA, the CDCA, Suppliers or Supplier Agents). This data is specified in BSCP533 PARMS Data Provision, Reporting and Publication of Peer Comparison Data. The data will be loaded automatically into the PARMS database using the corresponding PARMS validation process.

The data descriptions defined in the relevant Data sections of BSCP533 have been summarised in this paper into usable data identifiers.

The appropriate files are summarised below:

Output Data		
Serial	Titled	FILETYPE
TA01	GSP Group Correction Factor	P0137001
TA02	Annual Demand Ratio	P0138001
CM01	CVA MOA Proving Tests	P0133001
CM02	CVA MOA Fault Resolution	P0134001
SP01	Delivery of Routine Performance Reports	P0139001
SP02	Delivery of Routine Performance Logs	P0140001
SP04	Installation of HH Metering	P0142001
SP05	Retrospective Appointment of Agents	P0143001
SP06	D0148 Flow from Suppliers	P0144001
SP07	SMRA & SVAA MSID Count – SMRA File	P0045002 (SMRA)
SP07	SMRA & SVAA MSID Count – SVAA File	P0164001 (SVAA)
SP08	Energy and MSIDs on Actuals	P0145002
SP09	NHH Defaults	P0146001
NC02	NHHDC to NHHDC Meter Reads & History	P0150001
NM03	Provision of NHH METD to NHHDC	P0156001
NM04	Provision of NHH METD to New NHHMO	P0157001
HM01	HH Meter Faults: Time Taken to Resolve	P0158001
HM04	Provision of HH METD to HHDC	P0161001
HM05	Provision of HH METD to New HHMO	P0162001
HM06	Quality of D0268	P0163001
SP11	Timely Appointment of Agents	P0224001 [U1]
SP12	Timely Notification of Changes of the Data Aggregator via D0148	P0225001
SP13	Timely Notification of Changes of the Meter	P0226001

	<u>Operator Agent via D0148</u>	
<u>SP14</u>	<u>Timely Notification of Changes of the Data Collector via D0148</u>	<u>P0227001</u>
<u>SP15</u>	<u>Missing Appointments of Agents</u>	<u>P0228001</u>

PARMS Market Domain Data		P0136001
Suppliers Trading / Ceased Trading in GSP Groups		P0127001

2. PHYSICAL FILE PRESENTATION

2.1 Media

Data files will be submitted into PARMS by the Data Provider (Supplier, Supplier Agent or BSC Agent) in the form of ASCII files addressed to the Performance Assurance Administrator. A separate data file is required for each serial, although a number of files may be contained in one submission.

2.2 File Naming

An 8-character file naming convention will be used as follows:-

- -The 1st to 4th characters will be the participant ID of the Data Provider;
- -The 5th to 7th will relate to the File Identifier that will be used in the SVA Data Catalogue; and
- -The 8th will be the last digit of the year number (e.g. '2' for 2002, '3' for 2003).

The file extension will indicate the month to which the data pertains (JAN, FEB, MAR, APR, MAY, JUN, JUL, AUG, SEP, OCT, NOV, DEC).

It should be noted that all the file names for a Reporting Period should be for the month 't', ~~even for 't-1' Serials. 't' and 't-1' are described within BSCP533 Appendix B: PARMS Calculation Guidelines.~~

2.3 File Submission and Verification of Output Data

Data Providers should submit PARMS data +(x) WDs after the end of the Reporting Period as follows:

- Suppliers and Supplier Agents Routine Performance Monitoring Report: +20 WDs;

- SMRAs: +10 WDs; and
- SVAA: +7 WDs

~~As in the present case, the Data Provider will be required to submit PARMS data up to 20 WD (for Suppliers and Supplier Agents Routine Performance Monitoring Report information), 10 WD (for SMRAs) or 7 WD (for SVAA) after the end of the reporting period to which the data pertains.~~

All files will be submitted direct to BSCCo by the Data Providers specified in the File Formats. Where there has been no occurrence of an event monitored by a Serial, and the performance data involves a derived value (e.g. an average or percentage) Data Providers should reflect this by using nulls in place of the values for each Supplier and GSP Group. **If no data is provided at all then PARMS will regard the submission as incomplete and apply Supplier Charges if appropriate.** The process and timescale for submission is detailed in BSCP533 'PARMS Data Provision Reporting and Publication of Peer Comparison Data'.

Once received, ~~ELEXON~~ BSCCo will distribute any Supplier-related data to the relevant Suppliers in order to allow them to verify the data submitted by its appointed agents, particularly where poor performance against a serial may lead to Supplier Charges. Any queries raised will be dealt with between the Supplier and its Agent, and any resubmission of data should be by the specified Data Provider. (Suppliers can, of course, request that their Agents provide copies of any files submitted to PARMS for checking, but this will not be assumed by ~~ELEXON~~ BSCCo).

2.4 File Resubmission and Correction

Once a Data Provider has submitted a file, it may be resubmitted in order to correct errors subsequently identified in the file. **For each Serial, if a correction is required then a complete submission for the affected GSP Group must be provided**, such that it is made clear that the data that was originally correct should remain in the system. If a file is submitted containing only the corrected data, PARMS will assume that the rest of the data already stored in the system has been since been identified by the Data Provider as incorrect and that the data should be deleted from the system.

3. PHYSICAL FILE FORMATS

3.1 Pool File Format

The majority of the Data Output files will use the Pool file format. In this format, a file contains a number of records, each starting with a three-character identifier and ending with a Record Delimiter character. The first record of each file will be a header; the last a footer. The last record of a physical block will not require a Delimiter.

Each record contains fields of various types such as text, integer, date and time. The full range is described below:

Type	Format	Example
------	--------	---------

int (Integer)	ASCII representation, no leading zeros or spaces, leading “-” if negative (no sign if positive)	-1234 12
dec (Decimal)	ASCII representation. As for Integer, but with a decimal point and fixed number of decimal digits (including trailing zeros) dependent on precision	dec(4,2): -12.34 dec(3,2): 1.20
text	ASCII format, left aligned with trailing spaces stripped. Only includes printable characters excluding the separator	The quick fox
date	ASCII format as: YYYYMMDD	19961216
time	ASCII format as: HHMMSS (24 hour format). Note: both GMT and local time (e.g. British Summertime) will be used and will be indicated as necessary.	131501
date/time	ASCII format as: YYYYMMDDHHMMSS	19961216131501
bol (Boolean)	One ASCII character: T for True, F for False (uppercase only)	T F

A Field Separator character separates each field (**with the exception of the last field of each record**). All fields are mandatory, unless specifically indicated as optional in the 'comments' column. A null submission is achieved by omitting any characters between the Field Separators.

All files sent or received by ELEXON systems are structured as follows:

- Header - first record in file - record type = "ZHD"
- Body - other file records
- Footer - last record in file - record type = "ZPT"

For PARMS Output Data, the first record of the file "Body" is a Subject Participant Header (record type "SUB") containing information about the subject Market Participant.

Note that there may be many SUB records (e.g. where a Supplier has a number of Agents, or an Agent contracted to many Suppliers, and where the Supplier is operating in more than one GSP Group).

The components of these three standard record types are defined in the following tables:

ZHD - File Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZHD
2	File Type	text(8)	5 character type (ranges allocated for DTS, pool or internal use) plus 3 character version
3	From Role Code <u>[New Serials require MOA submissions to be split in to HH & NHH. Please see comments below on proposed solution.]</u>	text(1)	
4	From Participant Id	text(4)	
5	To Role Code	text(1)	'Z' (representing PA Administrator)
6	To Participant Id	text(4)	'POOL' (as used for iPARMS)
7	Creation Time	date/time	Time file processing was started. Specified in GMT.

SUB - Subject Participant Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= SUB
2	Market Sector	text(1)	= H (half hourly) = N (non-half hourly) = B (both) [Market sector is used to identify HH and NHH MOA submissions and data. As such a combination of 'From Role Code' and 'Market Sector' would be used. Therefore Market Sector code 'B' should not be used. Rather 'H' or 'NHH' should explicitly be used so as to identify who data came from i.e. HH or NHH MOA.]
3	Market Participant Role Code	text(1)	Role Code of the subject Market Participant
4	Market Participant Id	text(4)	Identifier of the subject Market Participant [Some of the new Serials (HM12 & NM12) require an 'unknown' MPID. A dummy MPID is needed e.g. UUUU. This will either be for an unknown MOA or DC.]
5	Period End Date	date	Date of the last calendar day of the period (generally either a month or a quarter) to which the data applies.
6	Periodicity	text(1)	Indicates whether the Period End Date is 'W' weekly, 'M' onthly or 'Q' quarterly.

ZPT - File Footer			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZPT
2	Record count	int(10)	Includes header and footer
3	Checksum	int(10)	Although type is shown as int(10) the value is actually a 32-bit unsigned value and hence will fit in an "unsigned long" C variable.

The remaining component of the File is a body record containing the required PARMS information. These will be specific for each Serial and, like the SUB record, will be repeated in situations where, for example, an SMRS or a Supplier Agent is operating in a number of different GSP Groups, or where data is required for a number of different Settlement Run types.

Some files involve the reporting of a data item against a list of Settlement Dates, such as for Serial SP07. **In these instances, the dates and the associated data items should be listed in ascending order.**

The character set used is based on the ISO Level B character set and will include the following characters:

Letters, upper case	A to Z
Letters, lower case	a to z
Numerals	0 to 9
Space character	
Full stop	.
Comma	,
Hyphen/minus	-
Opening parenthesis	(
Closing parenthesis)
Slash	/
Apostrophe	'
Plus	+
Colon	:
Equals	=
Question mark	?
Exclamation mark	!
Quotation mark	"
Percentage sign	%
Ampersand	&
Asterisk	*
Semi-colon	;
Less than	<
Greater than	>
Underscore	_

Field Separator: The vertical bar character '|' will be used as the separator.

Record Delimiter: The Line Feed character (hex "A") or a Carriage Return is used as the delimiter.

3.2 User File Format~~Not Used~~

~~A number of the serials make use of copies of exception report data flows transmitted by participants in accordance with the Master Registration Agreement Data Transfer Catalogue; these are in the User file format. This differs from the Pool file format by having a different file header, denoted as 'ZHV' rather than 'ZHD' and an adapted ZPT file footer. The structure of the ZHV header is as follows:~~

ZHV—User File Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	=ZHV
2	File Identifier	text(10)	File identifier unique within participant
	Data flow and version number	text(8)	Dxxxxnnn Consists of 5 character data flow reference followed by 3 character flow version number where 'n' has a range of 0-9 e.g. 001, 105....
3	From Role Code	text(1)	
4	From Participant Id	text(4)	
5	To Role Code	text(1)	e.g. 'Data Aggregator' value 'A'
6	To Participant Id	text(4)	
7	Creation Time	date/time	Time file processing was started. Specified in GMT.

~~The use of record delimiters and field separators and the allowable character set is the same as for the Pool file format.~~

~~The structure of the User file format adapted ZPT file footer is as follows:~~

ZPT—File Footer			
Field	Field Name	Type	Comments
1	Record Type	text(3)	=ZPT
2	File Identifier	text(10)	File identifier—unique within Market Participant
3	Total Group Count	int(10)	Total number of groups excluding file header and footer
4	Checksum	int(10)	Although type is shown as int(10) the value is actually a 32-bit unsigned value and hence will fit in an “unsigned long” C variable.
5	Flow count	int(8)	Number of flow instances excluding file header and footer
6	File completion timestamp	text(14)	DATETIME (GMT)

4. STANDING DATA FILE FORMATS

4.1 DP1 - Data Provider Information

This file provides PARMS with the identities of Supplier Agents that will be providing Output Data for that Supplier in each relevant GSP Group.

ZHD - File Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZHD
2	File Type	text(8)	= P0135001
3	From Role Code	text(1)	= X (Supplier)
4	From Participant Id	text(4)	= ID of originating Supplier
5	To Role Code	text(1)	= Z (Non-Core - PA Administrator)
6	To Participant Id	text(4)	= POOL
7	Creation Time	date/time	Date & time of file generation
DPI - Data Provider Information			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= DPI
2	GSP Group	text(2)	
3	Serial reference	text(4)	e.g. HM101, NM11C02, SP04, etc
4	Data Provider ID	text(4)	
5	Data Provider Role Code	text(1)	
6	Period end date	date	= Calendar date of end of reporting period
ZPT – File Footer			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZPT
2	Record count	int(10)	Includes header and footer
3	Checksum	int(10)	Although type is shown as integer(10) the value is actually a 32-bit unsigned value and hence will fit in an “unsigned long” C variable.

Backus-Naur Form:

Data Provider Information ::= ZHD {DPI} ZPT

4.2 PARMS Market Domain Data

ZHD - File Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZHD
2	File Type	text(8)	= P0136001
3	From Role Code	text(1)	= G (SVA Agent)
4	From Participant Id	text(4)	CAPG
5	To Role Code	text(1)	= Z (Non-Core - PA Administrator)
6	To Participant Id	text(4)	= POOL
7	Creation Time	date/time	Date & time of file generation
VER : MDD version			
1	Record Type	text(3)	= VER
2	MDD Version Number	int(8)	
GSG : GSP Group			
1	Record Type	text(3)	= GSG
2	GSP Group Id	text(2)	
3	GSP Group Name	text(30)	
GGD : GSP Group Distributors			
1	Record Type	text(3)	=GGD
2	Distributor Id	int(2)	
3	Market Participant Role Code	text(1)	
4	Effective from Date {MPR}	date	
5	Effective from Settlement Date {GGD}	date	
6	Effective to Settlement Date {GGD}	date	optional
MRC : Market Participant Role Codes			
1	Record Type	text(3)	= MRC
2	Market Participant Role Code	text(1)	
3	Role Code Description	text(30)	
MAP : Market Participants			
1	Record Type	text(3)	= MAP

2	Market Participant Id	text(4)	
3	Market Participant Name	text(40)	
4	Pool Member Id	text(4)	optional
MPR : Market Participant Roles			
1	Record Type	text(3)	= MPR
2	Market Participant Role Code	text(1)	
3	Effective from Settlement Date {MPR}	date	
4	Effective to Settlement Date {MPR}	date	optional
SSR : SSR Run Type			
1	Record Type	text(3)	= SSR
2	SSR Run Type	text(2)	
3	SSR Run Type Name	text(40)	
SSC : Settlement Calendar			
1	Record Type	text(3)	= SSC

APPENDIX 1: ALGORITHM FOR CHECKSUM REQUIRED FOR BSCCO DEFINED SOFTWARE

Introduction

In order to meet the Auditor requirements for a method of ensuring file integrity, a checksum algorithm was agreed with Logica that provides a signature for files coming into, and out from, the three Logica developed systems.

The purpose of the algorithm is to provide a reasonable degree of assurance that the binary nature of the file has not changed. It does not provide any assurance as to the accuracy of the data within the file.

Requirement

The checksum algorithm is defined as follows:

$W_{j,k}$ is the kth 4-byte word of the Jth record.

Therefore the function can be defined as:

$((W_{1,1} \text{ XOR } W_{1,2}) \text{ XOR } W_{1,3}) \dots \text{ XOR } W_{1+n,m})$

n = the total number of records (less the footer record)

m = the number of 4 byte words in the last record

Key points to note are that the algorithm:

- excludes line terminators
- excludes the last record
- where the last word of a record is less than 4 bytes then it is padded with binary zeroes.

Pseudo-Code

The detail of the algorithm is as follows (note that this assumes that each record is submitted one by one):

This takes four byte sections (excluding the end of line character), padded with nulls if required, and exclusive OR (XOR) them into checksum. The algorithm for this is illustrated by the following 'C-like' pseudo code.

```
num_chars = strlen (context.record buffer)
FOR (i = 0; i < num_chars;)
    value = 0
    FOR (j = 0; j < 4; i++, j++)
        IF i < num_chars
            value = ((value << 8) + context.record_buffer[i])
        ELSE
            value = value << 8
        END IF
    ENDFOR
    context.checksum = context.checksum XOR value
ENDFOR
```

Example Algorithm

This algorithm has been produced by the BSCCo in Visual Basic. This routine has been used in the generation of test data and the output of the routine has been checked against Logica data.

```
Public Function Calc(sFile As String) As Long
```

```
'Algorithm to Calculate Checksum from G. Swinton, 23/04/97.
```

```
On Error GoTo c1_Error
```

```
Dim i As Integer
```

```
Dim j As Integer
```

```
Dim chksum As Long
```

```
Dim bytes(4) As Integer
```

```
Dim sLine As String
```

```
' validate that the file exists
```

```
Open sFile For Input As #1
```

```
Do While Not EOF(1)
```

```
Line Input #1, sLine
```

```
i = 1
```

```
If Left$(sLine, 3) <> "ZPT" Then
```

```
For j = 1 To Len(sLine)
```

```
bytes(i) = bytes(i) Xor Asc(Mid$(sLine, j, 1))
```

```
i = i + 1
```

```
If i = 5 Then i = 1
```

```
Next
```

```
End If
```

```
Loop
```

```
For j = 1 To 4
```

```
chksum = chksum + (256 ^ (4 - j) * bytes(j))
```

```
Next
```

```
Calc = chksum
```

```
c1_Exit:
```

```
Close #1
```

```
Exit Function
```

```
c1_Error:
```

```
MsgBox Error$()
```

```
Calc = -1
```

```
Resume c1_Exit
```

```
End Function
```
