

Change Proposal – BSCP40/02	CP No: 1282 <i>Version No: 1.0</i> <i>(mandatory by BSCCo)</i>
Title <i>(mandatory by originator)</i> Maintenance of Outstation Types as part of Compliance and protocol approval	
Description of Problem/Issue <i>(mandatory by originator)</i> <p>'Outstation Type' is a data item contained within the D0268 Half Hourly (HH) Meter Technical Details flow and is used by HH Meter Operators (MOs) and HH Data Collectors (DCs) to specify and determine which protocols must be used in order to dial into a particular Outstation. It is defined in the MRA Data Transfer Catalogue (DTC) as a three-character identifier, along with a Valid Set of available codes.</p> <p>Outstation Types are not generic but rather act as references to specific Outstation makes and models, as in practice most metering communication protocols are manufacturer-specific. However, this means that if and when a new piece of equipment enters the market, it may not be properly represented by the Valid Set and so the HHDC may not be able to tell which protocol should be used, preventing them from dialling in to the Outstation.</p> <p>At present, altering the Valid Set requires a formal change to the DTC, yet new equipment may be introduced at any time, outside the DTC release timescales. The result is that the Valid Set will often be out of date, and participants will frequently have to resort to manual workarounds in order to transfer the necessary information.</p>	
Proposed Solution <i>(mandatory by originator)</i> <p>The Valid Set of Outstation Types should be removed from the DTC and instead be established as part of the Compliance and Protocol Approval process documented in BSCP601. Once an Outstation has passed protocol testing, an agreed Outstation Type would be established and included in a revised Approval List published on the BSC Website. This information can then be used by HHMOs and HHDCs to configure their communication systems appropriately so that they can receive the new codes in the D0268 flow. The draft redlining for BSCP601 is available in attachment A.</p> <p>All existing Outstation Types would remain valid and would be transferred to the relevant entries in the Approval List. Attachment B to this CP provides an example, based on an extract from the current list, with additional columns to show the Equipment Type (i.e. Meter or Outstation) and Outstation Type.</p>	
Justification for Change <i>(mandatory by originator)</i> <p>The current arrangements prevent new equipment from being used properly in the market. The proposed approach will allow Outstation information to be kept more up to date and in so doing will make it easier for participants to make use of new equipment.</p>	
To which section of the Code does the CP relate, and does the CP facilitate the current provisions of the Code? <i>(mandatory by originator)</i> <p>Section L 3.2</p> <p>This CP facilitates the current provisions of the Code; and aims to ensure that newly approved meters can be used without unnecessary delays.</p>	
Estimated Implementation Costs <i>(mandatory by BSCCo)</i> <p>The approximate cost for ELEXON to implement these changes is 1 Working Day, which is equivalent to £220.</p>	

Configurable Items Affected by Proposed Solution(s) *(mandatory by originator)*

BSCP601 'Metering protocol approval and Compliance Testing'

Impact on Core Industry Documents or System Operator-Transmission Owner Code *(mandatory by originator)*

MRA Data Transfer Catalogue (DTC CP – 'New Process for Managing Outstation Type Valid Set')

Related Changes and/or Projects *(mandatory by BSCCo)*

None

Requested Implementation Date *(mandatory by originator)*

November 2009 Release

Reason:

Next available implementation date

Version History *(mandatory by BSCCo)*

Version 1.0 for Impact Assessment

Originator's Details:

BCA Name.....*Bu-Ke Qian*.....

Organisation.....*ELEXON*.....

Email Address..... *bu-ke.qian@elexon.co.uk*.....

Telephone Number.....*020 7380 4146*.....

Date.....*27 February 2009*.....
