

**Change Proposal – BSCP40/02**

CP No: 1218

*Version No: 1.0*  
*(mandatory by BSCCo)*

**Title** *(mandatory by originator)*

Movement of the functional requirements within PSL 170 ‘Meter Administrator’ to BSCP520 ‘Unmetered Supplies Registered in SMRS’, following the creation of a generic non functional PSL via CP1182.

**Description of Problem/Issue** *(mandatory by originator)*

The Code Subsidiary Document (CSD) review has highlighted that there is a large amount of duplication between the requirements contained in Party Service Lines (PSLs) and the corresponding Balancing and Settlement Code Procedures (BSCPs).

During a consultation as part of the CSD review, industry participants were asked whether the functional requirements of PSLs should be merged into the appropriate BSCP and a single PSL created containing non functional requirements relevant to all Party Agents. The majority of respondents to the consultation agreed with this recommendation.

The Panel were asked to agree the recommendations of the CSD review and the CSD Architecture Principles Document at their meeting on 8 June 2006 (Panel 115/08). The Panel agreed that a single PSL should be created containing the non-functional requirements and the functional requirements in the existing PSLs should be merged into the relevant BSCPs.

A single generic PSL has been created (under CP1182) containing participants non-functional requirements. This PSL was implemented in the November 2007 Release.

Following on from CP1182, the functional requirements from the Meter Administrator PSL (PSL170) should be moved into BSCP520 (‘Unmetered Supplies Registered in SMRS’).

**Proposed Solution** *(mandatory by originator)*

Changes should be made to BSCP520 to include all of the functional requirements currently included in PSL170, as well as a summary of the UMS requirements that are stated in the BSC itself. Redlining to suggest where requirements currently in PSL170 should sit within BSCP520 is attached to this CP (Attachment A).

These changes will require additional more minor changes to BSCP537 Appendix 1 (‘Self Assessment Document (SAD)’) in terms of updating references to PSL170. This additional redlining is provided in Attachment B.

The aim of CP1218 is purely to move the functional requirements in PSL170 into BSCP520, and is not to change existing requirements in either document. While some rewording is needed, this should be minimised wherever possible, and in all cases the original requirements should be maintained.

If a significant number of inconsistencies are noted, a review of BSCP520 could be carried out following the approval of CP1218, should this be deemed useful.

**Justification for Change** *(mandatory by originator)*

This change will remove the duplication between PSL170 and BSCP520; and will mean that Meter Administrators will only have to look in one place to find the functional requirements relating to their role. This may be particularly useful to new entrants. It will also reduce the cost associated with preparing and maintaining numerous and duplicated PSLs.

**To which section of the Code does the CP relate, and does the CP facilitate the current provisions of the Code?** *(mandatory by originator)*

A housekeeping modification will be needed to update/remove references to PSL170 within the BSC before PSL170 is entirely removed. For efficiency, it is anticipated that a single housekeeping modification will be used to update all of the PSL references when all of the functional requirements in the PSLs have been moved into BSCPs.

**Estimated Implementation Costs** *(mandatory by BSCCo)*

The estimated ELEXON implementation cost is £220.

**Configurable Items Affected by Proposed Solution(s)** *(mandatory by originator)*

BSCP520 ('Unmetered Supplies Registered in SMRS')  
BSCP537 Appendix 1 ('Self Assessment Document (SAD)')

**Impact on Core Industry Documents or System Operator-Transmission Owner Code** *(mandatory by originator)*

None identified.

**Related Changes and/or Projects** *(mandatory by BSCCo)*

**CP1196**

CP1196 'Changes to incorporate Central Management Systems in Unmetered Supplies arrangements' was approved by the SVG in July 2007, and is due to be implemented in February 2008.

CP1196 proposes changes to both PSL170 and BSCP520, as such there is an interaction between CP1196 and this CP. Additional redlining highlighted in yellow in Attachment A shows where new wording introduced by CP1196 will move to when this CP is implemented.

**CP1204**

CP1204 'New charging code structure for Unmetered Supplies' was approved by the SVG in September 2007, and is due to be implemented in June 2008.

CP1204 proposes changes to BSCP520, and as such there is an interaction between CP1204 and this CP. Additional text highlighted in yellow in Attachment A shows how this interaction will be managed.

**Requested Implementation Date** *(mandatory by originator)*

June 2008

**Reason:**

Next available Release.

**Version History** (*mandatory by BSCCo*)

This is version 1.0 of CP1218 for Impact Assessment. This change was previously raised as DCP0010 ('Movement of the functional requirements within PSL 170 'Meter Administrator' to BSCP520 'Unmetered Supplies Registered in SMRS', following the creation of a generic non functional PSL via CP1182. '), information on DCP0010 is available on the [DCP0010 page of the ELEXON website](#).
