

Change Proposal – F40/01 (Page 1 of 2)

CP No: 929 v2.0
(mandatory by BSCCo)

Title (mandatory by originator)

Remove Performance Reports from ISRA software and products

Description of Change (mandatory by originator)

The ISRA software includes functionality to create a number of 'Pool Performance Reports':

These reports are not produced or sent by ISRA, having been replaced by the iPARMS and PARMS systems. This functionality has not been maintained for TA2000 (e.g. SIR R0295), and therefore cannot be guaranteed. However the ISRA documentation implies that the functionality is available and working.

A number of other reports have also been identified as being redundant as follows:

P0001 Energy Breakdown – this report has never been run
P0002 Measurement Profile – this report has never been run
P0006 NHHDA Settlement Class Consumption – this report has never been run
P0008 Settlement Run Equitability – this report has never been run
P0059 Split Pool Funds – this report has been redundant since NETA Go-live

Proposed Solution(s) (mandatory by originator)

Remove all reference to the following reports from all ISRA documentation and software:

P0001 Energy Breakdown
P0002 Measurement Profile
P0003 NHHDA Operational Performance Report
P0004 HHDA Operational Performance Report
P0005 NHHDA Performance Report
P0006 NHHDA Settlement Class Consumption
P0007 HHDA Performance Report
P0008 Settlement Run Equitability
P0009 SSA Operational Performance Report
P0010 Profile Administrator Performance Report
P0059 Split Pool Funds

Justification for Change (mandatory by originator)

Removal of redundant functionality from ISRA-related products will result in a correct and consistent set of requirements, software and documentation. Also, time taken for future ISRA regression testing will be reduced.
