

SAA Service Description

Add a new section to the end of the Service Description:

6. CONTINGENCY PROVISIONS

In certain circumstances Contingency Provisions will apply. The following procedures address the possibility of certain emergencies and other unusual or unexpected events of various kinds.

6.1 Single Imbalance Price

6.1.1 The SAA shall be notified by BSCCo if it has been determined that a single Imbalance Price should apply to any Settlement Period(s). In such circumstances,

- a) sections 3.28 and 3.29 shall not apply; and
- b) the System Sell Price and System Buy Price shall be equal, with the value as directed by BSCCo in its notification of the single Imbalance Price.

6.2 Total or Partial Shutdown of the Transmission System

6.2.1 The SAA will be notified if the System Operator has decided to implement a Total or Partial Shutdown of the Transmission System and will also be given notice of the time of the System's return to normal operation (the 'Black Start'). During the intervening period (the 'Black Start Period') the Balancing Mechanism is suspended and therefore no data is sent to the SAA by the SO.

6.2.2 The SAA shall receive notice from BSCCo that a single Imbalance Price will apply for Settlement Periods within the Black Start Period.

6.2.3 Following the Black Start, the SAA shall receive from the SO revised Bid-Offer data for the Settlement Period where substitution has occurred in time for the data to be used in the Initial Settlement Run for that Settlement Period.

6.3 Manifest Errors

6.3.1 The SAA shall undertake adjustments to the relevant data in relation to Manifest Errors as instructed by BSCCo.
