<p>Title <i>(mandatory by originator)</i> Provide half-hourly / non half-hourly SVA data split by BM Unit to National Grid</p>	
<p>Description of Change <i>(mandatory by originator)</i></p> <p>National Grid currently receives the D83 data flow from the SVAA in order to calculate TNUoS charges for Suppliers. The file provides information about the split between half-hourly and non half-hourly energy consumption for each Supplier for each GSP Group.</p> <p>National Grid needs to receive this information split down to the level of individual BM Unit.</p> <p>This level of detail is required for data from 1 April 2002. National Grid will not be reconciling Supplier charges for this year until data is available for the whole financial year (ie in May 2003).</p>	
<p>Proposed Solution(s) <i>(mandatory by originator)</i></p> <p>One solution would be to amend the format of the D83 file so that it includes the information required in the necessary level of detail.</p> <p>There may also be other options that provide a more cost-effective solution for both the industry and National Grid.</p>	
<p>Justification for Change <i>(mandatory by originator)</i></p> <p>The change is necessary to ensure that National Grid can calculate TNUoS charges in accordance with the Statement of Use of System Charging Methodology.</p> <p>Increasingly, Suppliers are choosing to have more than a single BM Unit within a GSP Group area and want their TNUoS charges calculating down to this level of detail. In addition, the changes arising from the implementation of BSC modification P7, mean that this level of detail is sometimes required to calculate charges correctly in situations where embedded generation has been netted off.</p>
