

## Change Proposal – F40/01 (Page 1 of 3)

**CP No: 774**  
(mandatory by BSCCo)

### **Title** (mandatory by originator)

Definition of new SVA Manual Data Flow

### **Description of Change** (mandatory by originator)

CP691 has incorporated a series of revised proving and validation rules in the Half Hourly Code Subsidiary Documents. One of the changes to BSCP502 relates to the situation where an HHDC detects a recorded energy in excess of the maximum permissible. If after sending a Metering System Investigation Request (D0001) to the Supplier there is no response, the HHDC applies the rules stated in section 4.1 of BSCP502. As a result of CP691, HHDCs will now also notify BSCCo when such a problem has been detected and the Supplier has not given any advice on the matter.

Although this new flow has been given a manual status, the flow itself has not been defined.

### **Proposed Solution(s)** (mandatory by originator)

A new manual flow is required in the BSC SVA Data Catalogue and will need to be referenced in BSCP502 step 3.4.1.7.

This flow should reiterate the details of the D0001 (Request Metering System Investigation) flow that was first sent to the Supplier when the problem occurred, but with additional details for the benefit of BSCCo:

#### **Supplier Details**

Supplier ID

#### **Visit Details**

Site Visit Check Code

#### **Metering Details**

Metering System ID

Meter ID (Serial Number)

#### **Meter Register Details**

Meter Register ID

Register Reading

Reading Date & Time

Reading Type

#### **Metering System Investigation Details**

Reason for Investigation request

Date of issue of D0001 to Supplier

### **Justification for Change** (mandatory by originator)

The manual flow introduced by CP691 requires definition in the BSC SVA Data Catalogue and a cross-reference in BSCP502.
