

**Title** (*mandatory by originator*)

Enhancements to the SVA Balancing Mechanism (BM) Unit registration process defined within the SVA CSDs.

**Description of Change** (*mandatory by originator*)

During NETA testing a number of problems were experienced during the SVA Balancing Mechanism (BM) Unit registration process and these relate to:

1. The provision of the BM Unit from the CRA to BSCCo (via the P0193 / CRA-I020 Operations Registration Report) and the SVA Agent for use in Market Domain Data (MDD) (via the P181 / CRA-I015 BM Unit Registration Data File).
2. The validation undertaken by BSCCo to compare the data provided by the SVA Agent (via the P0181 / CRA-I015) against the relevant MDD Change Proposal(s).
3. The information that the BSCCo provides to the SVA Agent instructing them to load the BM Unit data (via the P0181 / CRA-I015).
4. The wording associated with the timescales for proposing changes to BM Unit data.

This CP therefore proposes to resolve the above issues by modifying the appropriate Code Subsidiary Documents (CSDs).

**Proposed Solution(s)** (*mandatory by originator*)

Amend the following CSDs:

1. BSCP509 "Change to Market Domain Data"
  - a) Add BSCP15 to the list of associated procedures in section 1.5.
  - b) Replace the P0193 dataflow with the P0181 dataflow in step 4.11.2 of process 4.11 "Registration of BM Unit(s)". The P0193 dataflow contains superfluous data that is not required for SVA BM Units whereas the P0181 dataflow contains data which is more appropriate to the SVA BM Unit registration process.
  - c) Clarify the text in the "When" boxes of steps 4.11.1 and 4.11.2 of process 4.11 "Registration of BM Unit(s)" so that the text relates to the change being proposed "At least 30 WD before effective date of BM Unit change". As stated the text implies that only changes from the effective from date of BM Units are processed via this process when in fact changes relating to both the effective from and effective to dates are processed using this process.
  - d) Require the BSCCo, via step 4.11.3 of process 4.11, to compare the P0181 dataflow against the MDD Change Request(s). This will ensure that there is consistency of data across CRA and SVA systems.
  - e) Modify the text in step 4.8.1 of process 4.8 "Implementation of Market Domain Data" so that the BSCCo notify the SVA Agent of which BM Unit data file should be loaded for publication in MDD.
  - f) Delete footnote 8 relating to process 4.8.

- g) Clarify footnote 9 relating to process 4.8 so that the "from" in relation to the date is removed and that the change can relate to effective from and effective to dates.
- h) Include the three MDD forms (Form SSC1, Form SSC2 and the MDD Entity Forms) documents as an appendix to the BSCP and cross-reference this from Appendix 5.1. This will ensure that the user of the BSCP is aware that data has to be provided in a given format.

2. BSCP508 "Supplier Volume Allocation Agent"

- a) Add new steps to process 3.10 "Receipt of BM Unit(s)" so that the SVA Agent, upon request from the BSCCo, sends to BSCCo all the P0181 dataflows received from CRA since the last MDD publish. This will ensure the BSCCo can then compare this dataflow against the MDD Change Request(s).

3. SVAA SSL360 "Market Domain Data Management"

- a) Modify clause 1.1.3 so that it is consistent with proposal 2 a.

**Justification for Change** *(mandatory by originator)*

Implementing these changes will ensure that the CSDs document a process which has been tested and works.

These changes have been raised to rectify inconsistencies found prior to NETA go-live (but not raised as NCRs).

**Other Configurable Items Potentially Affected by Proposed Solution(s)** *(optional by BSCCo)*

There may be an impact on the following agents:

- 1. CRA: The CRA will be requested to provide to BSCCo the P0181 rather than the P0193 dataflow for process 4.11 of BSCP509. There is no proposal to remove the sending of the P0193 dataflow by the CRA from any other BSCP.
- 2. SVA Agent: There will be an impact on the SVA Agent in providing the P0181 dataflow to the BSCCo. This requirement will be met by the SVA Agent sending to BSCCo an e:mail containing all of the P0181 dataflows received since the last MDD publish.

An impact assessment is required to establish the costs of providing the revised service.
