

Standing Issue 20 - Fuel Security Code

'The DTI have recently published the draft changes to the Fuel Security Code for industry consultation. A modification will be required to amend the Balancing and Settlement Code to reflect the changes to the FSC, and it is likely that the timescales for progressing this modification will be limited. It is proposed that a Standing Issue be raised to allow industry consideration of the changes required to the BSC and to ensure that any potential issues with the drafting of the BSC changes are addressed prior to such a modification being raised. The intention is not for this Standing Issue to consider the merits of the changes to the FSC (views on the FSC changes can be provided to the DTI by responding to the consultation on the draft FSC changes) and should be limited to consideration of the impact the changes will have on BSC processes'.
