

### 4.3 CP Form

<b>Change Proposal – BSCP40/02</b>	CP No: 1386  Version No: 2.0 <i>(mandatory by BSCCo)</i>
<b>Title</b> <i>(mandatory by originator)</i>  Improving Settlement Accuracy for Unmetered Supply on a Change of Supplier or Change of Agent	
<b>Description of Problem/Issue</b> <i>(mandatory by originator)</i>  The current processes for a Non Half Hourly (NHH) Unmetered Supply (UMS) Change of Supplier (CoS) and Change of Agent (CoA) are based on the metered process where it is important to exchange historical consumption data between Agents.  This is not necessary for UMS sites as all consumption data / UMS inventory is agreed between the Unmetered Supplies Operator (UMSO) and Customer, within the National Terms of Connection (NTC) agreement. It is the experience of some BSC Parties that the new NHH Data Collector (NHHDC) does not accurately receive the required consumption data from the old NHHDC in either of the above scenarios.  As such a number of UMSO's participate in an industry workaround where the Estimated Annual Consumption (EAC) is sent directly by the UMSO to the new NHHDC. This workaround may not be followed within a timely manner as it is not a mandated requirement in the relevant BSCP.  Formalising this process in BSCP520 <sup>1</sup> will ensure the process becomes more robust.  <b>CP1386v2.0</b> has been raised as a result of comments raised during the participant Impact Assessment of CP1386v1.0	
<b>Proposed Solution</b> <i>(mandatory by originator)</i>  RWE npower propose that changes are made to BSCP520 section 3.3.2 and 3.5 to mandate the UMSO to send the EAC via a D0052 'Affirmation of Metering System Settlement Details' flow to the new NHHDC and remove the existing obligation to request and send data from the old NHHDC.  Changes have also been made to BSCP501 Section 1.7 and Sections 3.5-3.7 adding a timescale to the existing BSCP process where the Licenced Distribution System Operator (LDSO) is obligated to inform the UMSO of changes to registration data.  In addition to the proposed changes to BSCP501 and BSCP520, there are two minor housekeeping changes that have been included: <ul style="list-style-type: none"> <li>• BSCP501 section 3.10.13: correcting a footnote number reference from 20 to 19; and</li> <li>• BSCP520 section 1.2.1: Clarification change to support implemented Change Proposal <a href="#">CP1341</a>.</li> </ul>

## **CP1386 v2.0**

Based on the comments received from the participant Impact Assessment the following revisions have been made to the proposed redlined changes:

### **BSCP501:**

CP1386v1.0 added a timescale into BSCP501 1.7 'Use of Procedure' section. This has been revised with a reference to the relevant interface tables for the proposed timescale and activity of the LDSO informing the UMSO of any changes to UMS registration data. The timescale has then been added into the relevant interface tables within the BSCP.

### **BSCP520:**

The proposed new steps 3.3.2.7 and 3.3.2.8 in CP1386v1.0 in BSCP520, 3.3.2, have been merged into a single step and expanded to provide extra detail on the activity that should be undertaken by the UMSO. The combined timescale for the single step (3.3.2.7) has a revised timescale of 10 WDs to complete the action.

The Proposed new step 3.5.7 in BSCP520 3.5 has been expanded to provide extra detail on the activity to be undertaken by the UMSO.

### **Additional BSCP504<sup>2</sup> changes:**

In addition to the revisions to the BSCP501 and BSCP520 redlining, CP1386 v2.0 also includes minor changes to BSCP504 3.4.1.1 in order to clarify that the UMSO shall send the UMS EAC via the D0052 to the NHHDC. The reference to the Supplier and the D0205 'Update Registration Details' has also been separated to make it clear that the Supplier sends the D0205 as part of the registration process.

The proposed redlined changes to BSCP501, BSCP520 and BSCP504 can be found in Attachments A, B and C respectively.

## **Justification for Change** *(mandatory by originator)*

The benefits of the proposed solution includes:

1. Increasing the likelihood that the new NHHDC has an EAC in place prior to (or very shortly after) the CoS / CoA event.
2. Ensuring the EAC held by the NHHDC is the most up to date and accurate. There is no guarantee that the old NHHDC holds an accurate EAC.

This will improve the accuracy of UMS Settlement in the earlier Settlement Runs. It is also more aligned to the existing process for an amendment to the UMS inventory (BSCP520 Section 3.2).

---

<sup>2</sup> Non-Half Hourly Data Collection for SVA Metering Systems Registered in SMRS

**To which section of the Code does the CP relate, and does the CP facilitate the current provisions of the Code?** *(mandatory by originator)*

Section S, Annex S-2

**Estimated Implementation Costs** *(mandatory by BSCCo)*

1 Man Day effort equating to £240.

**Configurable Items Affected by Proposed Solution(s)** *(mandatory by originator)*

BSCP501 - Supplier Meter Registration Service

BSCP520 - Unmetered Supplies Registered in SMRS

BSCP504 - Non-Half Hourly Data Collection for SVA Metering Systems Registered in SMRS

**Impact on Core Industry Documents or System Operator-Transmission Owner Code** *(mandatory by originator)*

No Impact.

**Related Changes and/or Projects** *(mandatory by BSCCo)*

None identified.

**Requested Implementation Date** *(mandatory by originator)*

November 2013 Release

**Reason:**

In light of the responses to CP1386v1.0 the proposed implementation date has been revised from June 2013, to November 2013 to provide more time for affected parties to implement the change if approved.

**Version History** *(mandatory by BSCCo)*

Version 1.0 of CP1386 was issued on 30 November 2012.

Version 2.0 of CP1386 was issued on 25 January 2013.
