Health & Safety

In case of an emergency

An alarm will sound to alert you. The alarm is tested for fifteen seconds every Wednesday at 9.20am

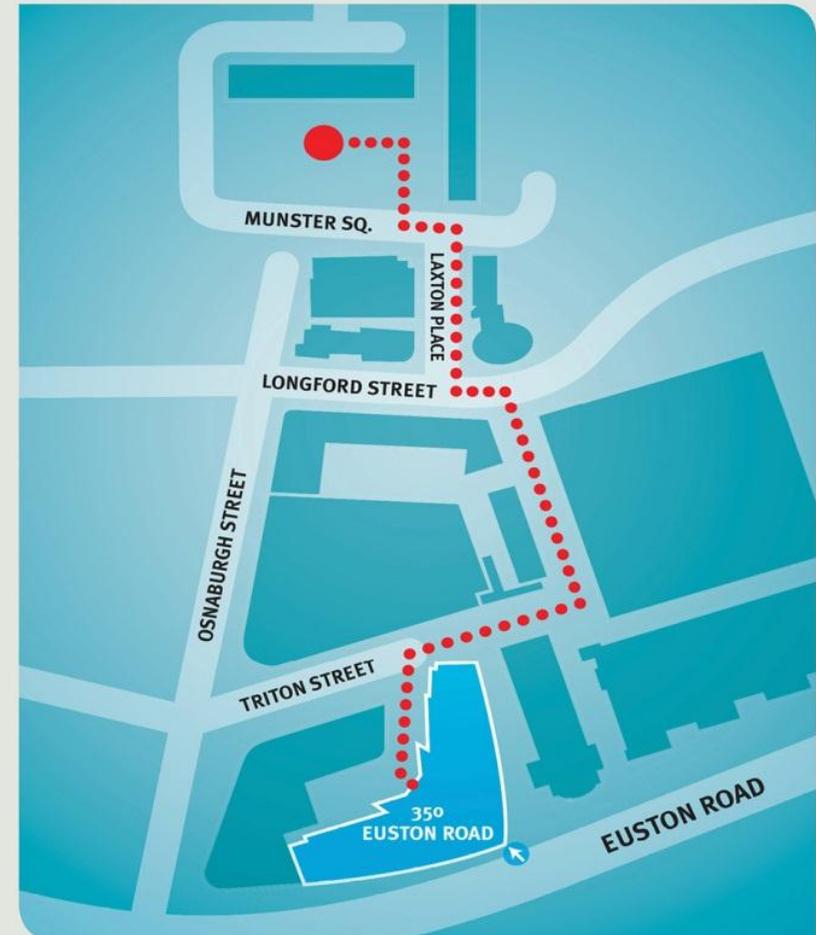

Evacuating 350 Euston Road

- If you discover a fire, operate one of the fire alarms next to the four emergency exits.
- Please do not tackle a fire yourself.
- If you hear the alarm, please leave the building immediately.
- Evacuate by the nearest signposted fire exit and walk to the assembly point.
- Please remain with a member of ELEXON staff and await further instructions from a Fire Warden.
- For visitors unable to use stairs, a Fire Warden will guide you to a refuge point and let the fire brigade know where you are.

When evacuating please remember

- Do not use the lifts.
- Do not re-enter the building until the all clear has been given by the Fire Warden or ground floor security.

Our team on reception is here to help you, if you have any questions, please do ask them.

Content

- Introductions – 10:30
- REMIT Discussions (Portal process & XSD) – 10:35
- Break - 11:20
- Transparency Data & Web UI – 11:30
- Lunch – 12:15
- API Update and Usage Policy – 12:45
- Next Steps – 13:45

Recap

Outline Phases in the proposed delivery model

Phase 1 - Establish the new platform and deliver Modifications P291 and P295. The functionality for P291 and P295 will include:

- New front end web server and user interface
- Data downloadable through new API (Application Programming Interface)
- TIBCO interface for existing TIBCO users

Phase 2 – Provide API for all Raw Data:

- Migrate the data loading components.
- Make all raw data being available via the API Interface
- Note derived data, e.g. imbalance prices will not be migrated until Phase 3

Phase 3 - Full functionality for all BMRS data and deliver Modification P297¹

- Migrate the BMRS calculations (such as imbalance price calculation)
- New front end web server and user interface for all BMRS published data
- P297 data available through all channels (including TIBCO)

REMIT Discussion

P291 – Submission Structure

- P291 data can reach the BMRS in several ways
 - Via a new page on the ELEXON Portal
 - Via submission using a new webservice on the ELEXON Portal
 - Via submission through the Grid Code

- P291 data is sent as XML documents to the BMRS
 - The same XSD is used whichever data entry route is chosen
 - Data entered using the ELEXON Portal GUI will create an XML document behind the scenes and forward it to the BMRS
 - A webservice submission must include an XML payload conforming to the XSD and the ELEXON Portal will forward that to the BMRS
 - A submission via the Grid Code must be an XML document conforming to the XSD

P291 – Data Registration

- Non-BSC data handling by the ELEXON Portal
 - The ELEXON Portal will be enhanced to allow non-BSC Organisations to register themselves for REMIT publication
 - Once registered, authorised users of these non-BSC Organisations will be able to use further new facilities on the ELEXON Portal to register Assets that they will then be able to report REMIT messages about.
 - The ELEXON Portal will be used to master the register of non-BSC Assets. They will not be propagated to the BMRS or to National Grid.
 - Non-BSC Organisations will have the equivalent of Category A Signatory users who will be able to delegate and authorise REMIT publishing rights to other Portal users also registered against that non-BSC Organisation.

P291 – Asset Registration

- Site Information
- ELEXON

Expand All | Collapse All | View Site Map

- Asset Registration page
- Only non-BSC Assets can be registered
- Users may choose their own Asset ID
- Unit ID could be used to group Assets together
- Area could be a BMRS Zone

P291 – REMIT Submission via the ELEXON Portal (1 of 2)

- Data submitted via the ELEXON Portal will be confirmed as accepted and validated by the ELEXON Portal only
 - The ELEXON Portal will perform XSD Validation to ensure the submitted XML data complies with the required definition and structure
 - Since data publication is performed by the BMRS we cannot tie the ELEXON Portal submission mechanism to an external application – BMRS processing is independent and asynchronous
 - There is no intention to acknowledge a REMIT submission via the ELEXON Portal beyond simple acceptance by the ELEXON Portal - The only possible route back to users that the ELEXON Portal currently has is email and that is not a good choice
 - For interactive UI submissions the feedback of acceptance by the ELEXON Portal will be displayed on the screen immediately following submission
 - For webservice submissions an acceptance will be returned with standard HTTP response codes indicating success or otherwise
 - It will be up to users to perform any further checks they feel are necessary

P291 – REMIT Submission via the ELEXON Portal (2 of 2)

- The ELEXON Portal will validate as much information as it can for submissions made via its webservice
 - Asset IDs must be known to the ELEXON Portal
 - Assets must be reported on by authorised users, either
 - using an interactive ELEXON Portal account that has the REMIT publishing permission for that Asset, or
 - using the ELEXON Portal webservice with the scripting key of an ELEXON Portal account that has the REMIT publishing permission for that Asset
- To ensure consistency with the data held in the ELEXON Portal's asset register, any asset attributes supplied in the XML will be replaced by those held against that asset in the Portal's asset register
 - The attribute fields in the XML will be optional, but whatever is supplied will be replaced by the details held in the Asset register before being sent to the BMRS

P291 – REMIT Message Identification

- The XSD for REMIT XML messages borrows many features from the XSDs created for P295 by ENTSO-E including document identification elements
 - However, validation rules are different than those for ENTSO-E
- A REMIT message includes a 35 char mRID element used as the Message ID
- Message IDs are considered unique within the domain of Participant ID.
- The structure of the mRID is entirely up to users and the mRID should provide users with ample opportunity to identify their REMIT messages as they wish
- The only validation performed is XSD validation to ensure only allowable characters are used; no further validation of structure or content will be performed
- A suggested form for mRID could be
<MP EIC Code>-NGET-RMT-<Sequence number>
Where <Sequence number> is an 8-digit, zero-padded integer

P291 – REMIT Message Follow-Up

- Users can follow-up on a REMIT message using a revisionNumber field if they wish
- Current thinking is that BMRS will not take any notice of the revisionNumber field. The mRID and revisionNumber fields are there to provide Participants with flexibility to manage their REMIT submissions.
- Any submission received by the BMRS with an mRID already known to it (for the Participant) is treated as a follow-up message. The value of revisionNumber is irrelevant to the BMRS.
- Messages are processed by BMRS in the order of receipt. The most recently received submission for any mRID is the “latest” version of a message and messages will be displayed on the BMRS in the order of receipt. This is to avoid possible after-event manipulation of REMIT data.
- Documents with mRID and revisionNumber values received already will NOT be rejected – these will be treated as follow-ups and displayed as such.

P291 – REMIT Message creation using ELEXON Portal UI

The screenshot shows the ELEXON Portal interface for creating a REMIT message. The top navigation bar includes 'ELEXON.co.uk', 'ELEXON Portal', 'BM Reports', and 'TAAMT'. The main header features the 'ELEXON Portal' logo and a 'site search' box. Below the header is a navigation menu with 'HOME', 'FAQS', 'USER GUIDE', 'SEARCH', 'FEEDBACK', and 'ADMIN'. A breadcrumb trail indicates 'YOU ARE HERE > Content > Operational Data > REMIT'. The main content area is divided into two tabs: 'CREATE MESSAGE' (active) and 'FOLLOW UP MESSAGE'. The 'CREATE MESSAGE' tab contains a form with the following fields and options:

- BSC Participant ID:** A dropdown menu.
- Non-BSC Organisation ID:** A dropdown menu.
- Message Id:** A text input field.
- Message Heading:** A text input field.
- Event Type:** A dropdown menu.
- Asset Id:** A dropdown menu with an 'Add>' button.
- Asset Name:** A text input field with a '<Remove' button.
- Asset Type:** A text input field.
- Unit Type:** A text input field.
- Unit ID:** A text input field.
- Area:** A text input field.
- Fuel Type:** A text input field.
- Normal Capacity:** A text input field.
- Available Capacity:** A text input field.
- Event Start:** A text input field.
- Event End:** A text input field.
- Duration Uncertainty:** A text input field.
- Cause:** A dropdown menu.
- Event Status:** Radio buttons for 'Open' (selected), 'Closed', and 'Cancelled'.
- Related Information:** A text input field.

At the bottom of the form are 'Submit' and 'Draft' buttons. A note states: 'A single message will be created with identical details for each selected asset'. On the right side, there is a 'MY PORTAL' section for 'John Smith' with links to 'My Profile', 'My Download Basket (empty)', and 'Bookmarks (manage)'. A 'log out' button is also present. Below that is a 'PORTAL CONTENT' section with a list of categories: 'Financial and Credit', 'LDSO Data', 'National Grid Data', 'Operational Data', 'Applications', 'Site Information', and 'ELEXON'. At the bottom of this section are links for 'Expand All', 'Collapse All', and 'View Site Map'.

- Messages can be saved as Draft for completion and submission to the BMRS at a later time

P291 – REMIT BMRS Overview 1

■ Data Loading

- Data conforming to the P291 REMIT XSD can be submitted to BMRS via FTP.
- Data will be sourced from both
 - National Grid
 - ELEXON Portal
- Follow up messages will be consistent with the ELEXON Portal Approach, ie messages with the same mRid will be treated as follow up messages and displayed in order of datetime of receipt.
- Once data is successfully loaded it will be:
 - Displayed on the BMRS UI.
 - Published to TIBCO rendezvous with a new XML payload.

P291 – REMIT BMRS Overview 2

■ Validation

- P291 data submitted to the BMRS will be validated against the P291 XSD.

■ Acknowledgments

- If data fails XSD validation an acknowledgement will be sent back to National Grid.
- When data has successfully passed validation and successfully loaded, an acknowledgment is sent back to National grid
- P291 acknowledgment messages will conform to ENTSOE published acknowledgement.xsd (current thinking).

P291 BMRS UI – Message Summary 1

The screenshot shows the ELEXON website's 'BM Reports' section. The navigation bar includes 'ELEXON.co.uk', 'ELEXON Portal', 'BM Reports' (highlighted), 'TAAMT', and 'Careers'. The main header features the ELEXON logo and a 'MESSAGES' tab. Below the header, there's a breadcrumb 'Home » Messages' and a 'DATE:' filter section with radio buttons for 'Ongoing event' (selected) and 'Date of publication'. A 'Next 7 Days' dropdown and date range '2014-03-20' to '2014-04-01' are visible, along with a 'FILTER MESSAGES' button and a 'More Filters' link. On the right, there are 'XML' and 'CSV' download options. The main content is a table with columns: Event Type, Published DateTime (GMT), Event Start DateTime (GMT), Event End DateTime (GMT), Message ID, Event Message, Asset ID, [Affected Unit], Fuel TType, and Affected Areas. The table contains four rows of 'Planned Outage' messages for EXAMGEN1.

Event Type	Published DateTime (GMT)	Event Start DateTime (GMT)	Event End DateTime (GMT)	Message ID	Event Message	Asset ID	[Affected Unit]	Fuel TType	Affected Areas
Planned Outage	2014-03-18 14:00:00Z	2014-03-18 14:00:00Z	2014-03-18 16:30:00Z	UMM-01-01212	EXAMGEN1 - Planned Outage for Power Station Generating Unit A from 20/03/14 14:00 untill 20/03/14 16:30	EXAMGEN1	G31	coal	B1
Planned Outage	2014-03-18 14:00:00Z	2014-03-18 14:00:00Z	2014-03-18 16:30:00Z	UMM-01-01212	EXAMGEN1 - Planned Outage for Power Station Generating Unit A from 20/03/14 14:00 untill 20/03/14 16:30	EXAMGEN1	NA	coal	B1

Message Summary

P291 BMRS UI – Message Summary 2

The screenshot displays the ELEXON BM Reports interface. At the top, there is a navigation bar with links for ELEXON.co.uk, ELEXON Portal, **BM Reports**, TAAMT, and Careers. Below this is the ELEXON logo and a breadcrumb trail: HOME > MESSAGES.

The main content area is titled "Home » Messages" and contains several filter sections:

- DATE:** Includes radio buttons for "Ongoing event" and "Date of publication", a "Next 7 Days" dropdown, and date input fields for "2014-03-20" and "2014-04-01".
- EVENT TYPE :** Includes checkboxes for "Planned Outage", "Failure", "Special Information", "Outage or limitation", "Expansion or dismantling", and "Market information".
- AREA:** Includes checkboxes for areas B1 through B17, with B3, B11, and B17 selected.
- FUEL TYPE :** Includes checkboxes for "Bio", "Coal", "Hydro", "Light oil", "Natural gas", "Nuclear", "Oil", "Oil shale", "Other", "Peat", "Wind", and "Empty".
- Asset ID :** Includes a text input field and an "OR" operator.

Below the filters are buttons for "FILTER MESSAGES" and "Hide Filters", along with "XML" and "CSV" download options.

The main table displays a list of messages with the following columns: Event Type, Published DateTime (GMT), Event Start DateTime (GMT), Event End DateTime (GMT), Message ID, Event Message, Asset ID, [Affected Unit], Fuel Type, and Affected Areas.

Event Type	Published DateTime (GMT)	Event Start DateTime (GMT)	Event End DateTime (GMT)	Message ID	Event Message	Asset ID	[Affected Unit]	Fuel Type	Affected Areas
Planned Outage	2014-03-18 14:00:00Z	2014-03-18 14:00:00Z	2014-03-18 16:30:00Z	UMM-01-01212	EXAMGEN1 - Planned Outage for Power Station Generating Unit A from 20/03/14 14:00 untill 20/03/14 16:30	EXAMGEN1	G31	coal	B1

P295 BMRS Transparency UI

P295 – BMRS Transparency Overview 1

■ Data Loading

- Data conforming to specific ENTSOE Transparency XSDs can be submitted to BMRS via FTP.
- Data will be received from National Grid
- Once data is successfully loaded it will be:
 - Displayed on the BMRS UI.
 - Published to TIBCO Rendezvous with a new XML payload.
 - Published to EMFIP Transparency Platform via the Unicorn ECP Platform.

■ Validation

- P295 data submitted to the BMRS will be validated against
 - The appropriate ENTSOE XSD eg generationload.xsd, outage.xsd
 - Standard ENTSOE document version rules eg mRID, revisionNumber duplication

P295 – BMRS Transparency Overview 2

■ Acknowledgments

– Failure

- If there is a failure in the data loading process including
 - XSD validation
 - Submission to EMFIP

A negative acknowledgement will be sent back to National Grid source application either generated from BMRS or the EMFIP platform.

– Success

- When data has successfully passed validation and in turn successfully submitted to the EMFIP platform, the positive acknowledgment from EMFIP is conditionally forwarded to National Grid.

– Data

- P295 acknowledgment messages will conform to ENTSOE published acknowledgement.xsd

P295 – BMRS UI 1

The screenshot displays the 'Planned Unavailability Of Consumption Units' page in the ELEXON NETA interface. The page includes a navigation menu with 'HOME', 'MESSAGES', and 'TRANSPARENCY'. The main content area shows a date and time interval selector with 'From Date & Time' set to '2014-03-18 03:30 am' and 'To Date & Time' set to '2014-03-18 07:30 am'. A 'View' button is present. Below the selector is a table with columns: 'Time Series ID', 'Date', 'Start Time (GMT)', 'End Date', 'End Time (GMT)', 'Quantity (MAW)', 'Reason', and 'Reason Description'. The table contains several rows of data for 'NGET-EMRIP-PUCU-0001' with a 'Shutdown' reason. A calendar widget is overlaid on the table, showing the month of March 2014. Callout boxes point to 'Message Type' (pointing to the 'TRANSPARENCY' link), 'Download Options' (pointing to 'XML' and 'CSV' buttons), and 'Reason Description' (pointing to the 'Reason Description' column).

Time Series ID	Date	Start Time (GMT)	End Date	End Time (GMT)	Quantity (MAW)	Reason	Reason Description

Amount Of Balancing Reserves Under Contract

A17.1b

API Update & Policy

API Requirements

- Aims

- Secure and performant industry facing webservice platform.
- Initially P291 and P295 data will be provisioned as part of phase 1.

- Principles

- Expose a set of RESTful webservice
- Provides the P295 BMRA ETR and P291 REMIT data as a service
- Requests for the data can be made based on a set of parameters
- Authentication will be provided by an API Key
- Transport will be over HTTPs
- Services will be versioned
- Response formats XML CSV will be included as a parameter.
- Standard HTTP response codes will be used.

API Example 1

Article Name:

B0710	Planned Unavailability Of Consumption Units	A7.1a
-------	---	-------

URL Format:

```
http://<host>:<port>/bmrs/B0710/<versionNo>?apikey=<apikey>&startDateTime=<startDateAndTime>&endDateTime=<endDateAndTime>&serviceType=<xml/csv>
```

URL Request example:

```
http://207.2.36.9:7006/bmrs/B0710/1?apikey=AP8DA23&startDateTime=2014-03-18 14:00:00Z &endDateTime=2014-03-18 14:30:00Z &serviceType=xml
```

API Example 2

Article Name:

B1720 Amount Of Balancing Reserves Under Contract A17.1b

URL Format:

```
http://<host>:<port>/bmrs/B1720/<versionNo>?apikey=<apikey>&settlementDate=<settlementDate>&period=<period>&serviceType=<xml/csv>
```

URL Request example:

```
http://207.2.36.9:7025/bmrs/B1720/1?apikey=SDF234S&settlementDate=2014-03-18&period=12&serviceType=xml
```

API Usage Policy

- Principles
 - Ensure fair usage
 - Maintain performance of API and Interactive website
 - Protecting the Service
- Registration for users
- Data Capping/request will be part of API Design (and can be adapted)
- Assigning Key & Revoking keys
- Restrictions
- Support Levels

Next Steps
