## 1. Management Summary

The Energy Contract Volume Aggregation Agent (ECVAA) is one of the suite of seven services that support the operation of the Balancing and Settlement Code (BSC).

The role of the ECVAA is to collate and provide to the Settlement Administration Agent (SAA) all energy contract volume and metered volume reallocation data. The principal business processes involved may be summarised as:

- The approval of Energy Contract Volume Notification Agent Authorisations between two BSC Parties and their appointed Energy Contract Volume Notification Agent(s);
- The approval of Metered Volume Reallocation Notification Agent Authorisations between a Lead Party, Subsidiary Parties and their appointed Metered Volume Reallocation Notification Agent(s);
- The receipt and validation of Energy Contract Volume Notifications and Metered Volume Reallocation Notifications from appropriate notification agents up until Gate Closure for each Settlement Period;
- The credit checking of BSC Parties on a Settlement Period basis and the rejection of notifications should a Party breach their credit limit threshold;
- The transmission of aggregated Energy Contract Volumes and valid Metered Volume Reallocation data to the SAA at the end of each Settlement Day.

### 1.1 Purpose

The purpose of this document is to provide a complete specification of the set of business requirements which the ECVAA service must satisfy for all of its various user types. These range from the BSC Parties to BSCCo Ltd and its various agents, including the operators of the ECVAA itself and the other BSC services. Similar <u>documents define</u> the requirements for the other services. A convention has therefore been used for uniquely identifying the requirements in each document, so as to ensure that the fulfilment of each requirement can be unambiguously traced through the subsequent functional specification, design and implementation.

The requirements which have been identified have been divided into four categories:

- Functional requirements those requirements relating to a specific business activity, usually requiring some degree of automated support;
- Interface requirements the detailed requirements for the exchange of data between the ECVAA, the other BSC services shown above, and the external participants;
- Non-functional requirements those requirements relating to such activities as security (both physical and user access related), audit, and system

Balancing and Settlement Code

housekeeping (systems backups and archiving etc.). It is anticipated that the majority of these will be common to all of the services to be provided;

• Service requirements – the underlying service delivery requirements of the ECVAA service, including such as issues as performance and volumetrics.

These requirements are catalogued in sections 5 to 8 respectively.

### 1.2 Scope

The document defines the requirements for the Energy Contract Volume Aggregation Agent service of the NETA Central Systems. The requirements are described from the point of view of the ECVAA Service Operators. The full document scope is listed within section 3 of this document.

## 2 Introduction

This document is the User Requirements Specification (URS) for the Energy Contract Volume Aggregation Agent role within the Balancing and Settlement Code Services. It is one of a set of documents forming the baseline for requirements of the seven NETA services. This document set comprises:

- BMRA URS;
- CRA URS;
- SAA URS;
- TAA URS;
- ECVAA URS;
- CDCA URS;
- FAA URS;
- Interface Definition and Design.

The objective of this document is to provide a complete specification of the user requirements that the ECVAA service must meet. For this purpose, the "users" include BSCCo Ltd, Ofgem, National Grid as the balancing mechanism operator, other Service Providers, BSC Parties, and the ECVAA Service Provider's own operators.

This User Requirements Specification forms the input to the lower level documents such as the System Specification and Design Specification for the ECVAA Service. These specifications constitute the definition of the computer systems built in support of the ECVAA Services.

**Balancing and Settlement Code**

## **3** Scope of Specification

This document provides a specification of the requirements for the Energy Contract Volume Aggregation Agent (ECVAA) Service within the NETA programme. The requirements are described from the point of view of the ECVAA Service users.

The document is divided into the following chapters.

- Chapter 4, Business and System Overview describes the business context of the ECVAA Service;
- Chapter 5, Functional Requirements describes the functional requirements of the Service from the point of view of the Service users;
- Chapter 6, Interfaces Requirements- describes the interfaces with the external users of the Service;
- Chapter 7, Non-Functional Requirements describes the non-functional requirements of the Service, such as auditing, security and resilience;
- Chapter 8, Service Requirements describes the service delivery requirements of the Service, such as performance and volumetrics;
- Chapter 9, User Roles and Activities describes the roles supporting day to day operation of the Service and external users of the Service, such as other Service Providers and BSCCo Ltd;
- Chapter 10, Future Enhancements describes potential functional enhancements;
- Appendix A, Glossary includes a glossary of terms and acronyms;
- Appendix B, Requirements Compliance Matrix shows the mapping of requirements defined by this document to requirements set out in the Customer's Tender Invitation documents;
- Appendix C, Logical Data Model;
- Appendix D, Business Process Model.

Page 7 of 86 © ELEXON Limited 2013

## 4 **Business and System Overview**

### 4.1 Summary of Business Requirements

The Energy Contract Volume Aggregation Agent is responsible for the following key roles:

- the approval of Energy Contract Volume Notification Agent Authorisations (ECVNAAs) between two BSC Parties and their appointed Energy Contract Volume Notification Agent(s);
- the approval of Metered Volume Reallocation Notification Agent Authorisations (MVRNAAs) between a Lead Party, Subsidiary Parties and their appointed Metered Volume Reallocation Notification Agent(s);
- the receipt and validation of Energy Contract Volume Notifications and Metered Volume Reallocation Notifications from appropriate notification agents up until Gate Closure for each Settlement Period;
- the credit checking of BSC Parties on a Settlement Period basis and the rejection of notifications should a Party breach their credit limit threshold;
- the transmission of aggregated Energy Contract Volumes and valid Metered Volume Reallocation data to the SAA at the end of each Settlement Day.

### 4.1.1 ECVNAA Approval

The ECVAA will receive, validate, approve and record Energy Contract Volume Notification Agent Authorisation (ECVNAA), <u>Authorisation Change</u> and termination requests from BSC Parties appointing Energy Contract Volume Notification Agent(s) (ECVNA). In many cases these notification agents are likely either to be power exchanges or market participants themselves.

### 4.1.2 MRVNAA Approval

The ECVAA will also receive, validate, approve and record Metered Volume Reallocation Notification Agent Authorisation (MVRNAA) and termination requests from BSC Lead and Subsidiary Parties appointing Metered Volume Reallocation Notification Agent(s) (MVRNA).

### 4.1.3 Notification Collection

The ECVAA will receive Energy Contract Volume Notifications prior to Gate Closure from authorised ECVNAs which will be validated against its register of approved ECVNAAs.

The ECVAA will also receive Metered Volume Reallocation Notifications prior Gate Closure from authorised MVRNAs which will be validated against its register of approved MVRNAAs.

**Balancing and Settlement Code** 

Page 8 of 86 © ELEXON Limited 2013 The ECVAA Service must be available 24 hours a day, 365 days a year in order to ensure that ECVNS and MVRNs can be registered in near real-time up to Gate Closure for any particular half-hour.

4.1.4 Credit Checking

Immediately after Gate Closure for each Settlement Period the ECVAA will perform credit checking of all BSC Parties. Should a Party breach their credit limit threshold the ECVAA will reject notifications that increase the Indebtedness of that Party. In addition, the ECVAA will warn BSC Parties and BSCCo Ltd about Parties who are approaching their credit limit.

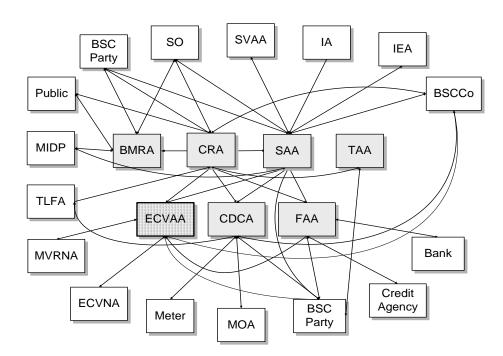

4.1.5 Aggregation and reporting to SAA

At the end of each Settlement Day the ECVAA will aggregate the notified Energy Contract Volumes to determine the Account Bilateral Contract Volume for each BSC Party. The ECVAA will then transmit the Account Bilateral Contract Volumes and validated MVRNs to the SAA in timely manner to allow SAA to comply with the requirements of the Settlement Calendar.

Page 9 of 86 © ELEXON Limited 2013

## 4.2 Service Context

The following diagram illustrates the context of the ECVAA service within the wider scope of the Balancing and Settlement Code. This is a simplified view for clarity; section 6 describes the interfaces from the ECVAA service to other parties in detail.

**Balancing and Settlement Code** 

Page 10 of 86 © ELEXON Limited 2013

Item	Description	
Bank	A bank which receives debit and credit instructions from the Funds Administration Agent.	
BMRA	Balancing Mechanism Reporting Agent.	
BSC Party	A party which is signatory to the Balancing and Settlement Code	
BSCCo Ltd	The Balancing and Settlement Code Company.	
CDCA	Central Data Collection Agent.	
CRA	Central Registration Agent	
Credit Agency	A credit agency which provides credit cover data on BSC Parties.	
ECVAA	Energy Contract Volume Aggregation Agent.	
ECVNA	Energy Contract Volume Notification Agent.	
FAA	Funds Administration Agent.	
IA	Interconnector Administrator.	
IEA	Interconnector Error Administrator	
Meter	A physical meter registered within the Balancing and Settlement Code arrangements.	
MIDP	Market Index Data Provider	
MOA	Meter Operation Agent.	
MVRNA	Metered Volume Reallocation Notification Agent	
Public	A member of the general public.	
SAA	Settlement Administration Agent.	
SO	System Operator	
SVAA	Supplier Volume Aggregation Agent, equivalent to the current Initial Settlement a Reconciliation Agent (ISRA).	
TAA	Technical Assurance Agent.	
TLFA	Transmission Loss Factor Agent	
Transfer Coordinator	A role undertaken by BSCCo Ltd to coordinate transfers of metering between CVA (CRA & CDCA) and SVA in order to address the risk that Metering Systems are 'double counted' or 'omitted' from Settlements'.	

## 4.3 User Requirements Source Documents

In addition to our tender, the reference documents listed in section 1.5 have been used. The code listed in the first column is used as a cross reference in the detailed requirement specifications listed in section 5.

Page 11 of 86 © ELEXON Limited 2013

## 4.4 Requirements Summary

The following table summarises the requirements of the ECVAA service. These are then described in detail in section 5, including the source reference for each requirement. Requirements common to all the NETA Central Services are described in the CRA URS.

Requirement ID.	User Requirement	
Functional		
ECVAA-F001	Process Registration Data	
ECVAA-F002	Process Credit Limit Data	
ECVAA-F003	Process Energy Contract Volume Notification Agent Authorisation	
ECVAA-F004	Process Metered Volume Reallocation Notification Agent Authorisation	
ECVAA-F005	Process Energy Contract Volume Notifications	
ECVAA-F006	Process Metered Volume Reallocation Notifications	
ECVAA-F007	Perform Credit Check	
ECVAA-F008	Aggregate Energy Contract Volumes	
ECVAA-F009	Process Exception Data	
ECVAA-F010	Calculate Party Indebtedness	
ECVAA-F011	Process Credit Cover Minimum Eligible Amount Request	
ECVAA-F012	Process Volume Notification Nullification Requests	
ECVAA-F013	Manage ECVAA System Failure / Withdrawal	
ECVAA-F014	Matching of Submitted ECVNs	
ECVAA-F015	Matching of Submitted MVRNs	
ECVAA-F016	ECVAA Web service Common Functionality	
ECVAA-F017	ECVAA Web service – BSC Party View ECVNs Functionality.	
ECVAA-F018	ECVAA Web service – BSC Party View MVRNs Functionality.	
ECVAA-F019	ECVAA Web service - ECVNA Functionality	
ECVAA-F020	ECVAA Web service - ECVNA ECVN Submission Functionality.	
ECVAA-F021	ECVAA Web service - MVRNA Functionality	
ECVAA-F022	ECVAA Web service - MVRNA MVRN Submission Functionality.	
ECVAA-F023	Banning/Unbanning Individual User Access to the ECVAA Web service Functionality	
ECVAA-F024	Process Withdrawing Party Authorisation and Notification Details	
ECVAA-F025	Calculate Period Final Physical Notification Volumes	
ECVAA-F026	Removal of ECVNs / MVRNs from ECVAA for a Party in section H Default	
Interface		
ECVAA-I001	Receive Registration Data	
ECVAA-I002	Receive Energy Contract Volume Notification Agent Authorisation Data	
ECVAA-I003	Receive Metered Volume Reallocation Notification Agent Authorisation Data	
ECVAA-I004	Receive Energy Contract Volume Notifications	
ECVAA-I005	Receive Metered Volume Reallocation Notifications	
ECVAA-I006	Receive Credit Limit Data	
ECVAA-I007	Issue Energy Contract Volume Notification Agent Authorisation Feedback	
ECVAA-I008	Issue Metered Volume Reallocation Notification Agent Authorisation Feedback	

**Balancing and Settlement Code** 

Page 12 of 86 © ELEXON Limited 2013

Requirement ID.	User Requirement			
ECVAA-I009	Issue Energy Contract Volume Notification Feedback (Rejection)			
ECVAA-I010	Issue Metered Volume Reallocation Notification Feedback (Rejection)			
ECVAA-I011	Issue Account Bilateral Contract Volume Report			
ECVAA-I012	Issue Metered Volume Reallocation Notification Report			
ECVAA-I013	Issue Authorisation Report			
ECVAA-I014	Issue Notification Report			
ECVAA-I015	Receive BM Unit Credit Cover Meter Volume Data			
ECVAA-I016	Issue Exception Reports			
ECVAA-I017	Issue ECVAA Performance Report			
ECVAA-I018	Receive Acknowledgement			
ECVAA-I019	Issue Acknowledgement			
ECVAA-I020	Receive Exception Report			
ECVAA-I021	Issue Credit Limit Warning			
ECVAA-I022	Forward Contract Report			
ECVAA-I023	ECVAA BSC Schedule D Charging Data			
ECVAA-I024	Receive Credit Cover Minimum Eligible Amount Request			
ECVAA-I025	Issue Credit Cover Minimum Eligible Amount Report			
ECVAA-I026	Issue Minimum Eligible Amount Rule Request			
ECVAA-I027	Notification of BSC Party in Section H Default			
ECVAA-I028	Issue ECVN Acceptance Feedback			
ECVAA-I029	Issue MVRN Acceptance Feedback			
ECVAA-I030	Receive Notification Agent Termination Request			
ECVAA-I031	Issue Notification Agent Termination Feedback			
ECVAA-I032	Receive Credit Assessment Price			
ECVAA-I033	Receive Credit/Debit Report			
ECVAA-I034	Reserved for future use			
ECVAA-I035	Receive Forward Contract Report Start Period Override			
ECVAA-I036	Publish Credit Default Report			
ECVAA-I037	Receive Volume Notification Nullification Request			
ECVAA-I038	Issue Volume Notification Nullification Confirmation Report			
ECVAA-I039	Issue Nullification Completion Report			
ECVAA-I040	Issue Notification System Status Report			
ECVAA-I041	Receive Party Credit Default Authorisation Details			
ECVAA-I042	Banning/Unbanning Individual User Access to the ECVAA Web service			
ECVAA-I043	ECVAA Web Service – BSC Party View ECVNs.			
ECVAA-I044	ECVAA Web service – BSC Party View MVRNs.			
ECVAA-I045	ECVAA Web service – ECVNA View ECVNs			
ECVAA-I046	ECVAA Web service – MVRNA View MVRNs.			
ECVAA-I047	Issue Withdrawing Party Authorisation and Notification Details			
ECVAA-I048	Receive Physical Notification Data			
ECVAA-I049	Request to remove all ECVNs and MVRNs from ECVAA for a Party in Section H Default			

**Balancing and Settlement Code**

ECVAA-S003	Resilience Requirements	

### 4.5 Numbering Scheme for Requirements Definitions

As described in section 2, the set of baseline requirement documents will include a User Requirements Specification for each of the services of the central NETA systems (except FAA - see footnote 1). Within these documents each requirement across the set of services is uniquely identified to provide traceability of each individual requirement from URS to System Specification (functional specification) and then to Design Specification (technical specification).

In keeping with industry good practice, this URS adopts a requirements numbering system that works as follows:

1. Each requirement is be associated with either an individual service, or as common to all services supported by our systems. (TAA will typically be excluded from the latter.) If a requirement applies to more than one service, but not all (e.g. two out of six), then the requirement will be restated for each, i.e. there would be two separately numbered requirements (which happen to be the same) in this example.

Each requirement is prefaced by one of the following codes, as a clear indicator as to which service generates the business need:

- CRA (Central Registration Agent);
- SAA (Settlement Administration Agent);
- CDCA (Central Data Collection Agent);
- ECVAA (Energy Contract Volume Aggregation Agent);
- BMRA (Balancing Mechanism Reporting Agent);
- TAA (Technical Assurance Agent);
- FAA (Funds Administration Agent);
- GEN (General). General requirements are described in the appendices of the CRA URS.
- 2. Requirements are categorised into the following headings:
  - Functional (F), a specific business requirement of the service.

- Interface (I), a requirement for data exchange between services or to external parties.
- Non-functional (N), which includes auditing, security, resilience etc. The majority of these will probably be associated with the General (GEN) service.
- Service (S), which includes all time-related service delivery requirements, including performance and volumetrics.
- 3. Within a service, each requirement has a unique number in the range 001 to 999. Numbers are not unique across services. Leading zeroes are always included.

Combining 1, 2 and 3 thus gives the following format for numbering each requirement (including a separator character):

## [Service]-[Category][Number]

For example:

- CRA-F001
- BMRA-S022
- GEN-N112
- SAA-I033

### 4.6 Attributes of Individual Requirements

For each identified requirement, the following items of information are represented in a tabular format:

**Requirement ID:** a unique identifier for the requirement, as described above.

**Status:** while the majority of ECVAA requirements will be mandatory for the Go Live date, others may not necessarily be. This field indicates whether the requirement is Mandatory (M) or Optional (O) in this context.

**Title:** a short descriptive title for the requirement.

**BSC reference:** a cross reference to the BSC section which is the original source of the business need. Note that there may be detailed requirements identified in the User Requirements Specification which are not individually described in the BSC; in this case this field is used to reference the alternative source of the requirement, for instance a specific workshop with the customer's user community.

**Man/auto:** this field provides an indication as to whether a given requirement is likely to be satisfied by a manual, as opposed to automated, mechanism.

**Balancing and Settlement Code** 

Page 15 of 86 © ELEXON Limited 2013 **Frequency:** an indication of how often a business event will take place. Minimum, maximum and average frequencies, and any timing or scheduling requirements, are also identified here, as appropriate.

**Volumes:** data volumes associated with the requirement are identified here; this may include an estimate of the initial volume, and subsequent growth rates.

The requirement is then described in detail, with any associated specific nonfunctional and interface requirements separately identified. Any outstanding issues relating to the requirement definition are also identified.

## **5 Functional Requirements**

This section describes the detailed set of business requirements for the Energy Contract Volume Aggregation Agent Service. To ensure traceability through to other deliverable documents such as the System Specification and Design Specification, each requirement is uniquely numbered, based on the convention described in section 4.

<b>Requirement ID:</b>	Status:	Title:	BSC Reference:
ECVAA-F010	Mandatory	Calculate Party	CR012, CR012b, CR028, P2,
		Indebtedness	CP869, P140, P215

**5:** Calculate the Credit Assessment Energy Indebtedness of each BSC Party for Settlement Period j (CEI<sub>pj</sub>) using  $(QABC_{pj} - CAQCE_{pj})$ .

For any earlier Settlement Periods where  $CAQCE_{pj}$  has been recalculated as described in the last paragraph of section **4**, recalculate  $CEI_{pj}$ .

**6:** Add the Account CA Credited Energy Volume  $(CAQCE_{aj})$  for the current Settlement Period j to the cumulative value for the current Settlement Day (which also includes the previous 28 days) to give the Account Cumulative CA Credited Energy Volume (CCAQCE<sub>aj</sub>). For any earlier Settlement Periods where CAQCE<sub>aj</sub> has been recalculated as described in the last paragraph of section **3**, include the new value in the sum in place of the old value.

Add the Account Bilateral Contract Volume (QABC<sub>aj</sub>, calculated in ECVAA-F008) for the current Settlement Period j to the cumulative value for the current Settlement Day (which also includes the previous 28 days) to give the Account Cumulative Energy Contract Volume (CQABC<sub>aj</sub>).

Add the Credit Assessment Energy Indebtedness ( $CEI_{pj}$ ) for the current Settlement Period j to the cumulative value for the current Settlement Day (which also includes the previous 28 days) to give the Cumulative Credit Assessment Energy Indebtedness ( $CCEI_{pj}$ ). For any earlier Settlement Periods where  $CEI_{pj}$  has been recalculated as described in the last paragraph of section **5**, include the new value in the sum in place of the old value.

The ECVAA shall store the cumulative Volume and Indebtedness values (calculated above) for each Settlement Day in its systems.

7: Calculate Metered Energy Indebtedness ( $MEI_{pd}$ ) for BSC Parties for those settlement days for which they have registered effective BM Units with a Credit Qualifying Status of "True" and for which BM Unit Credit Cover Meter Volume Data have been received from CDCA.

Calculate the Metered Credit Assessment Energy Volume (MAQCE<sub>iaj</sub>) as follows:

Where Metered Volume data was determined by the CDCA for the BM Unit in the Credit Cover Volume Allocation Run for Settlement Period j, then for Subsidiary Accounts:

 $MAQCE_{iaj} = QM_{ij} * (QMPR_{iaj}/100) + QMFR_{iaj}$ 

while for Lead Energy Accounts:

 $MAQCE_{iaj} = QM_{ij} - \Sigma_a MAQCE_{iaj}$ 

Where Metered Volume data was not determined by the CDCA for the BM Unit in the Credit Cover Volume Allocation Run for Settlement Period j then:

 $MAQCE_{iaj} = CAQCE_{iaj}$ 

The Metered Energy Indebtedness  $(MEI_{pj})$  of a Trading Party p in relation to a Settlement Period j shall be determined as:

 $MEI_{pj} = - (\Sigma_{a,i} MAQCE_{iaj} - \Sigma_a QABC_{aj})$ 

Where  $\Sigma a$  extends to the Production Energy Account and Consumption Energy Account of the Trading Party.

The ECVAA shall store Metered Energy Indebtedness values in its systems.

The Metered Energy Indebtedness values will only become available for subsequent processing at Gate Closure for Settlement Period 1 of a Settlement Day

**Balancing and Settlement Code** 

Page 48 of 86 © ELEXON Limited 2013

Indebtedness       CP869, P140, P215         8: Calculate Actual Energy Indebtedness (AEI <sub>nd</sub> ) for BSC Parties for those settlement days for which Inter Initial Credit/Debit reports have been received from SAA as follows:         Trading Charges = Energy Imbalance Cashflow + Information Imbalance Charge + Non-delivery Charge + Residual Cashflow Reallocation + BM Payments         AEI <sub>pd</sub> = Trading Charges / CAP         Where CAP is the Credit Assessment Price effective on day d as received via ECVAA-I032.         The ECVAA shall store Actual Energy Indebtedness values in its systems.         The Actual Energy Indebtedness values will only become available for subsequent processing at Gate Clost for Settlement Period 1 of a Settlement Day.         9: The Total indebtedness for a BSC Party for a settlement day, (TEI <sub>pd</sub> ), shall be defined as: If a value for (AEI <sub>pd</sub> ) is available from step 7, then TEI <sub>pd</sub> = AEI <sub>pd</sub> Otherwise, if a value for (MEI <sub>pd</sub> ) is available from step 7, then TEI <sub>pd</sub> = MEI <sub>pd</sub> Otherwise, TEI <sub>pd</sub> = the sum of Credit Assessment Energy Indebtedness as calculated in Step 5 for t day d         The ECVAA shall have the ability to revise the Total indebtedness for a BSC Party for a Settlement Day wi its systems in support of disputes.         10: Calculate the Energy Indebtedness for Party (EI <sub>pi</sub> ), as the sum of TEI <sub>pd</sub> for the current Settlement Day a the previous 28 Days. Requirement ID:	Status:	Title:	BSC Reference:
•	Mandatory	Matching of submitted	DOS

#### ECVAA-F015 Mandatory Matching of submitted P98 MVRNs Man/auto: Volumes: Frequency: High Automatic Continuous **Functional Requirement:** ECVAA-F006 describes requirements to process MVRNs such that a position is established on behalf of each of the BSC Parties referenced in the MVRN. ECVAA-F015 describes how the positions established on behalf of each BSC Party are correlated to give the matched position. 1: For Settlement Periods falling within the matching window, the ECVAA shall determine where the Metered Volume Fixed Reallocation and Metered Volume Percentage Reallocation notified on behalf of both parties to the MVRNAA contain the same values. The Matching Window is defined as the current day plus the next 7 days. The matching function will consider values for the same MVRN (as identified by the MVRNAA ID and Reference Code), Settlement Day and Settlement Period for equivalence. 2: Where the values match, the matched values shall be stored for use in settlement. For the avoidance of doubt, the matched values remain in force unless and until both MVRNAs submit new matching values. The matched values are subjected to the Credit Check Rejection process. A match is only achieved if matching values for both the Metered Volume Fixed Reallocation and Metered

#### 5.16 Notes on Notification Processing and Reporting

In general Notifications are stored (and reported in the ECVAA-I022) using the same date range as Notified. There are some exceptions to this, and this section describes these circumstances. This processing applies equally to ECVNs and MVRNs.

Note that the Current Date is the earliest date for which not all Settlement Periods in the day have passed Gate Closure and the Applied From <u>Date (as reported in the ECVAA-I028/ECVAA-I029)</u> is the later of the Current Date and the Effective From Date in a received Notification.

Data for the Current Date is never changed for those periods where Gate Closure has already passed.

**Balancing and Settlement Code** 

I

Page 55 of 86 © ELEXON Limited 2013 Deleted: Date (

To determine the date range(s) stored (and reported):

- If Effective From = Effective To, the Notification will be stored as received (Multi-Day flag = "S").
- Otherwise (the Notification spans multiple dates):
  - For Notification with Effective From Date > Current Date: the Notification will be stored as received (Multi-Day flag = "M")
  - Otherwise (For a Notification with Applied From Date = Current Date):
    - If there is an exact match between the Notification and the data already held by ECVAA for the notification (including the case where there is currently no data on the database) for **all** periods for which Gate Closure has passed, then the Notification is stored as a single date range from the Applied From Date to the specified Effective To Date (Multi-Day flag = "M").
    - Otherwise, the Notification is stored as two records, a single day for the Current Date (Multi-Day flag = "M" *unless* Current Date is a Clock Change Day, in which case the Periods are converted to 46/50 period day and Multi-Day = "S") and the remainder from Current Date+1 to specified Effective To Date (Multi-Day flag = "M")

The following table shows how Notifications are stored (and subsequently reported) in various scenarios. Note that the "Multi-Day" flag is not reported, but is shown here for clarity.

From EC	VN/MRVN			As stored on the database			
Notification Start date	Notification End date	Ref / Notes	Multi- Day Flag	Effective From date	Effective To Date	Period Data	
Current Date	Current Date	А	S	Current Date	Current Date	As held pre-Gate Closure, as notification after gate closure	
Future Date	Future Date	В	S	Future Date	Future Date	As notification	
Future Date	Future Date + n (>0)	С	М	Future Date	Future Date + n (>0)	As notification	
Past Date or Current Date	Future Date	D**	S	Current Date	Current Date	As held pre-Gate Closure, as notification after Gate Closure	
			М	Current Date + 1	Future Date	As notification	
		E*	М	Current Date	Future Date	As notification	
Past Date	Current Date	F**	S	Current Date	Current Date	As held pre-Gate Closure, as notification after Gate Closure	
		G*	М	Current Date	Current Date	As notification	

\* - Only where period data exactly matches previously held pre-Gate Closure period data for Current Date and the Current Date is not a clock change day.

\*\* - Where period data does not exactly match previously held pre-Gate Closure data for the Current Date, or the Current Date is a clock change day. In these cases, the

**Balancing and Settlement Code** 

Page 56 of 86 © ELEXON Limited 2013 Current Date part will be mapped into a clock change day (46/50 periods) if appropriate.

An existing Multi-Day <u>Notification that</u> starts before and ends on or after the Applied From Date of a received Notification which <u>replaces</u> it will have its Effective To date set to Applied From Date *minus one*. the "Multi-Day" flag will remain "M". For example,

- an existing notification with Effective From Date D and Effective To Date D+5 is overwritten by a Notification with Applied From Date D+3; here the existing Notification's Effective To Date is set to D+2, with the new Notification starting at D+3.
- an existing notification with Effective From Date D and Effective To Date D+5 is overwritten by a Notification Applied From Date D+1; here the existing Notification's Effective To Date is set to D, with the new Notification starting at D+1.

Note that in this second example, if D is a clock change day, the data will be correctly converted from 48 to 46/50 periods due to the Multi-Day flag being set to "M"

Any Notifications stored with a single day range and the "Multi-Day" flag set to "M" are processed by the ECVAA-I022 Forward Contract Report such that the reported data is mapped into a clock change day (46/50 periods) if appropriate.

For Dual Notifications all the rules described above still apply but with the additional constraint, that the received Notification, or the counterparty's stored notification may be split such that the date ranges stored for Notifications from both counterparties are the same. This is required so that a matched position can be established for date ranges where both counterparties' Agents have submitted a contiguous set of values.

The following example illustrates this point:

Agent 1	A		В
Agent 2	С	D	E

In the diagram above, the position submitted by Agent 1 covers contiguous date ranges A and B. Agent 2 then subsequently submits 3 separate Notifications covering date ranges C, D and E. When Agent 2's Notifications are stored, the date ranges are split to give the following:

**Balancing and Settlement Code** 

Page 57 of 86 © ELEXON Limited 2013 Deleted: Notification which
Deleted: overwrites

Agent 1	С	F	G	Е	н
Agent 2	С	F	G	E	

In this way, it is possible to derive and store a single matched position (see ECVAA-F014 and ECVAA-F015) for each date range.

Note that it is possible that a single day date range (e.g. 'H' in the example above) may result from this processing. In this case, the reporting will be as described above.

5.17 ECVAA-F016: ECVAA Web Service Common Functio

Fu	nctional Require	ment:				
1.	The user shall be able to create a new submission based on an existing MVRN position for a notification, or create a new MVRN for an existing authorisation from the MVRN Creation page.					
2.	. The MVRN Creation Page shall allow a user to submit individual MVRNs directly via the screen, or to submit multiple MVRNs by uploading a comma separated variable (csv) file containing the required notification data.					
3.	. The submission of MVRNs from the web server may be confirmed or cancelled after successful validation.					
4.	The MVRN shall be validated. The following validation shall be carried out; That there is no missing mandatory data.					

**Balancing and Settlement Code** 

Page 67 of 86 © ELEXON Limited 2013

The format of completed data shall be checked against the ECVAA-I005 notification submission interface for compatibility.	;
The effective to date (if it exists) shall be checked to ensure that it is not before the effective from date.	
The effective to date (if it exists) and the effective from date shall be checked to ensure that these dates	
are not in the past.	
Where a submission contains percentage reallocations, validation shall be carried out to ensure that any applied percentage is less than or equal to 100%.	
For a new notification, all fixed re-allocation periods shall default to zero, and all percentage re-	
allocations shall default to 100%.	
Note that this validation is in addition to the normal business validation carried out on a submission after it has been acknowledged.	
5. Any validation failure shall be notified to the user by a screen message requiring acknowledgement, and the user returned to the creation page.	
6. Under single notification, a user shall not be required to submit two notifications. A single submission shall update both parties' notification positions.	
7. The file sequence of web submissions shall be known as the web submission number and will be unrelated to the File Sequence number from a notification agents system. The Web submission number	
shall be updated automatically when a notification is submitted.	
8. On successful validation of an MVRN web submission, the user shall be required to confirm or cancel the submission. Cancellation shall result in the user being returned to the creation page with no notification	;
submission taking place.	
9. On confirmation of an MVRN web submission, the user shall receive a screen based acknowledgement of	1
the submission, which shall include web submission number and the date and time of submission. This confirmation will replace the ECVAA-I019 acknowledgment.	
10. The data and time of submission will be the date and time of the materialisation of a file containing the	
notification details by the web submission process.	_
11. The materialised file will contain the authorisation key for the logged on agent. The credentials file	
security will provide the security required to verify the logged in user is valid for the submission. The	
authorisation key will be obtained from the database.	_
12. Following successful submission of an MVRN web submission, the notification file will be processed	
through the standard MVRN processing as described in MVRNs ECVAA-F005. The transaction number for the notification will be generated in the same way as a normal notification.

## **6** Interfaces Requirements

The ECVAA Service shall provide an interface to the following external parties.

Other Service Providers:

- Central Registration Agent (CRA)
- Funds Administration Agent (FAA)
- Settlement Administration Agent (SAA)
- Balancing Mechanism Reporting Agent (BMRA)
- Central Data Collecting Agent (CDCA)

Other external parties:

- BSC Party
- Energy Contract Volume Notification Agent (ECVNA)
- Metered Volume Reallocation Notification Agent (MVRNA)
- BSCCo Ltd

The ECVAA Service shall provide inbound and outbound interfaces as summarised in the following table. Each interface requirement is described in detail below.

Details of the contents of interfaces relevant to ECVAA are contained in the Interface Definition and Design (IDD). In the event of discrepancies between the URS and IDD, the interface document takes precedence.

Reqt No.	Interface Requirement	Inbound/ Outbound	Interface User (IU)	Mechanism
ECVAA-I001	Receive Registration Data	Inbound	CRA	Automatic
ECVAA-I002	Receive Energy Contract Volume Notification Agent Authorisation Data	Inbound	BSC Party, ECVNA	Manual
ECVAA-I003	Receive Meter Volume Reallocation Notification Agent Authorisation Data	Inbound	BSC Party, MVRNA	Manual
ECVAA-I004	Receive Energy Contract Volume Notifications	Inbound	ECVNA	Automatic
ECVAA-I005	Receive Meter Volume Reallocation Notifications	Inbound	MVRNA	Automatic
ECVAA-I006	Receive Credit Limit Data	Inbound	FAA	Automatic

# 7 Non-Functional Requirement

This section describes the non-functional requirements specific to the ECVAA Service. Requirements common to all the NETA Central Services are described in the appendices of the CRA URS.

### 7.1 ECVAA-N001: Web Security Requirements

1		Status:	Title: Wah Interface Security	D a autimum auto	BSC Reference:
		M	Web Interface Security	Requirements	P98, P197
Man/auto:     Frequency:     Volumes:       As required     As required     As required					
	Functional Require	1	As required		
1.			e systems required to support t	he Internet web	hased access of the
1.			ata shall be protected against u		
2.	NETA WAN. The	performance of thi	Veb Interface accessible via the service shall be commensurated to forthcoming contractuation of the service shall be commensurated as the service shall be commensurated as the service shall be commensured as t	ate with the low	
3.	be encrypted using		ween the ECVAA webserver and encryption/decryption fac protocol.		
4.	• •	y length used by the internet banking we	e HTTPS protocol shall be suc ebsites)	ch that adequate	security is provided
5.	•		ogin page shall only be grante ) and password values.	d by providing c	correct and
6.	Any failure during the login process shall normally return the user to the main login page without any indication of which part of the login authentication actually failed. The exception to this is when the user provides the correct User ID and password information, but some other restriction in their credentials file prevents login (e.g. credentials file expired, incorrect login day, incorrect source IP address).				
7.	Users must select the Party or Agent ID to which they wish to operate under during the login process.				
8.	Users must provide a suitably formatted Credentials file at login that has been previously encrypted using their selected organisation's NETA Public Key Infrastructure (PKI).				
9.			e that any password used is at with at least one in uppercase		
10.	The ECVAA Web	service shall provid	de facilities that allow passwo	ords to be change	d in a secure manner.
11.	Passwords shall ha	ave validity for a co	ntrollable period of time.		
12.	All data displayed to users once logged in is commercially sensitive to their organisation and therefore only data pertinent to the Party or Agent that the user selected at login may be accessible to the user.				
13.	The ECVAA Web of user inactivity h		natically disconnect a user after	er a configurable	system default period
14.	The user-supplied Credentials file shall contain an optional user-configurable section to allow the user to reduce the timeout below the system default.				
15.	The ECVAA Web	service shall allow	connection from any IP addre	ess.	
16.	The user-supplied Credentials file shall contain an optional user-configurable section to allow the user to specify an IP address, set of IP addresses or domains from which it is acceptable for the user to connect from.				
17.	The ECVAA Web	service shall allow	connection 24 hours a day, 7	days a week.	
18.	The user-supplied Credentials file shall contain an optional user-configurable section to allow the user to specify the time of day for working and non-working days at which it is acceptable for the user to initiate a connection.				
19.	Access to the ECVAA Web service credentials file software shall be granted and controlled by Authorisation category 'Z' signatories.				

**Balancing and Settlement Code** 

Page 76 of 86 © ELEXON Limited 2013

20.	Parties that withdraw from or are expelled from being a Qualified BSC Party shall have their access to the ECVAA Web service withdrawn simultaneously to their access to other ECVAA services.
21.	Access to the Web service shall be granted to users by role. These roles shall be; Read Only, Edit, and Admin. BSC Parties will be provided with Read Only access to the BSC Party Web Site, ECVNA's and MVRNA's may be provided with Read Only of Edit access to their respective Web Sites as required. The credentials file issued shall contain the role that it has been issued for a separate credentials file shall be issued for each role granted to a user.
22.	Audit requirements shall include; Details of notification submitted The submitting organisation and role code The time of receipt Processing details [Job and transaction parameters] Events generated

# 8 Service Requirements

This section describes the service delivery requirements specific to the ECVAA Service. Requirements common to all the NETA Central Services are described in the appendices of the CRA URS.

### 8.1 ECVAA-S001: Service Availability

	irement ID: AA-S001	Status: M	<b>Title:</b> Service Availability	<b>BSC Reference:</b> ECVAA SD: 2.1, 3.1	
Man/auto:     Frequency:     Volumes:       Manual & Automatic     Image: Constraint of the second secon					
	Functional Requir This requirement is	ement: s subject to contract	negotiations.		
1.	1. The ECVAA shall provide a 24x7 service, to enable support of its near real-time notification processing requirements.				
2.	2. The ECVAA shall perform the responsibilities and obligations of the service for all Settlement Days for which the ECVAA is appointed by the Customer.				

### 8.2 ECVAA-S002: Volumetric Requirements

<b>Requirement ID:</b> ECVAA-S002	Status: M	<b>Title:</b> Volumetric Requirements	<b>BSC Reference:</b> RETA SCH: C4 RETA ITT: A3	
<b>Man/auto:</b> Manual & Automatic	Frequency: As required	Volumes:		
Non Functional Requirement: The following tables list the ECVAA workloads as defined in the document Volumetric Assumptions [VOL].				

Page 77 of 86 © ELEXON Limited 2013

The following table gives the assumptions on ECVNA Workload:

ECVNA Work	Go Live	Future
ECVNA Authorisations initial load	1000	
ECVNA New authorisations per week	50	50
ECVNA Authorisation terminations per week	50	50
Parties trading at one contracts/period	100	250
Parties trading at 200 contracts/period	6	50
Trades per period	650	5125
ECVN per day	31200	246000
ECV Notifications rejected per year (credit checks)	6	6

The following table gives the assumptions on MVRNA Workload:

MVR	Go Live	Future
MVRNA Authorisations initial load	500	
MVRNA Authorisations per week	10	10
BMUs with 2 MVR, notifying every 5 days	200	200
BMUs with 6 MVR, notifying every 5 days	150	150
BMUs with 6 MVR, notifying every period	0	50
MVRN day notifications submitted per day	260	260
MVRN period notifications submitted per day	0	15000
Total MVRN submitted per day	260	15260
MVR Notifications rejected per year (credit checks)	6	6
Number of BM Units with MVR split	350	400
Avg number of parties in an MVR split	3.7	4
MVRN in effect in any period	1300	1600

The following table gives the assumptions on Web service workloads:

Load	Go Live	Future
Simultaneous users	140	140
Query rate (per min/user.)	2	2

### 8.3 ECVAA-S003: Resilience Requirements

Status:	Title:	BSC Reference:		
М	Resilience			
	Requirements			
Man/auto: Frequency: Volumes:				
Manual & Automatic As required				
Non Functional Requirement:				
1. The ECVAA system shall run on a very high availability and resilient dual processor architecture, and				
support an automatic fail over capability if either processor node fails.				
2. The ECVAA system shall automatically detect and highlight to the operator any significant errors to				
allow timely actions to be taken and a high level of service to be achieved.				
	M Frequency: As required nent: n shall run on a very hig ic fail over capability if n shall automatically de	M       Resilience Requirements         Frequency: As required       Volumes:         nent:       n shall run on a very high availability and resilient ic fail over capability if either processor node fails n shall automatically detect and highlight to the op

### 9 User Roles and Activities

The user roles which will support the day to day operation of the ECVAA service are common to those supporting the CRA Service, and so are described in the CRA URS.

These roles and activities will be refined and developed in more detail during detailed business process definition.

The following parties are associated with the ECVAA business processes in the wider context, and may thus be considered as "users" of the service. The detailed functional requirements and data interfaces necessary to support these parties are described earlier in this chapter.

Role	Summary of Activities related to ECVAA
Central Registration Agent (CRA)	Provides registration data to the ECVAA which defines the set of items such as the BM Units relevant to each trading period.
Funds Administration Agent (FAA)	Provides credit limit data to the ECVAA to allow the credit exposure of BSC Parties to be determined.
Settlement Administration Agent (SAA)	Receives aggregated energy contract volumes and metered volumes reallocations from the ECVAA for the settlement of BSC Parties financial trading positions.
Central Data Collecting Agent (CDCA)	Provides BM Unit meter volume data which is used to derive participant energy indebtedness.
BSC Party	Provides energy contract volume and metered volume reallocation authorisations to the ECVAA jointly with the appointed notification agent.
Energy Contract Volume Notification Agent (ECVNA)	Provides energy contract volume notifications to the ECVAA to allow calculation of account bilateral contract volumes for BSC Parties.
Metered Volume Reallocation Notification Agent (MVRNA)	Provides metered volume reallocation notifications to the ECVAA to for validation.
BSCCo Ltd	Receives performance reports from the ECVAA.

### **10** Future Enhancements

No future enhancements to the ECVAA Service have been identified at this stage.

### Appendix A Glossary

A standard NETA glossary is included in the CRA URS.

Page 79 of 86 © ELEXON Limited 2013

# Appendix B Requirements Compliance Matrix

The following table shows the mapping of requirements defined in this URS document to the requirements set out in the Service Description for Energy Contract Volume Aggregation [ECVAA SD].
