

#### 4.1 Draft CP Form

<b>Draft Change Proposal – BSCP40/01</b>	<b>DCP No: N/A</b>  <i>Version No: v1.0</i> <i>(mandatory by BSCCo)</i>
<b>Title (mandatory by originator)</b>  <b>Consequential change from REC to enable mismatches in data between CSS and MPRS to be corrected</b>	
<b>Description of Problem/Issue (mandatory by originator)</b> <p>The <a href="#">MHHS Programme CR 045</a><sup>1</sup> was rejected with the expectation that code bodies would take forward a change to enable mismatches in data between the Central Switching Service (CSS) and the Metering Point Registration System (MPRS) to be corrected. There will be a progression of a REC CP (<a href="#">R0201 'Creation of a Tool to Manually Correct ERDS / CSS Discrepancies'</a><sup>2</sup>) and following this a consequential BSC CP will be needed to address the Supplier Meter Registration Service (SMRS) functionality required following a correction.</p>	
<b>Justification for Change (mandatory by originator)</b> <p>From MHHS go live, where an issue arises which leads to the ERDS under REC and SMRS under BSC governance from reflecting the correct Registered Supplier, the Supplier will not be able to appoint agents. This issue only applies to MHHS Migrated Metering Points as the existing mechanism for manually correcting data would be used if the issue related to a non-migrated Metering Point.</p> <p>In the event the Supplier cannot appoint its agents this will impact both Settlements, and create a safety risk for the consumer, as there will be no Meter Operator Agent (MOA) appointed to attend site in the event of an emergency. Furthermore, the absence of Meter Technical Details and validated meter readings may prevent the Supplier from accurately billing the Consumer.</p> <p>This Change was initially discussed by the MHHSP with CR045 raised and impact assessed. The BSC will align with the REC CP as this is required to introduce the new business process elements. DIP market messages will be issued to participants once the registration data is corrected.</p>

**Proposed Solution** (mandatory by originator)

Following implementation of R0201 to enable the correction of CSS and MPRS mismatches, updated market messages are required to be sent, the IF-001 and IF-037. IF001 to be issued to the Gaining Supplier, Licensed Distribution System Operator (LDSO) (optional) and MDS informing them of the Supplier Registration within SMRS. Losing Supplier should have received the CSS loss notification. The IF037 to be issued to Losing Supplier Agents with De-App reason CSUPP, effective to date off SSD -1. This CP will enable SMRA to be updated with the revised supplier start dates following the alignment of date mismatches and prompt to the supplier to trigger appointment flows

If the mismatch is related to a Missed switch the IF-037 then a new even code of CSUPP shall be used

If the mismatch is related to a Switch Revocation-

For IF-037 a new event code REGSFIX should be used

For IF-001 SwitchRevoked to 'Revoked Supplier' (Optional), LDSO (Optional) and MDS. IF-001 [SwitchRestored] issued to [previous] restored Supplier (Optional), LDSO (Optional) and MDS. This is used as a prompt that Supplier needs to instigate an exception process and needs to issue Appointment flows

The IF-037 should be triggered automatically following the issue of the IF-001

**Version History** (mandatory by BSCCo)

V1.0 – This is the first version of this Change Proposal

**Has this DCP been raised for discussion by a Working Group?**

No
