

---

**Meeting name** BSC Panel  
**Date of meeting** 09 August 2007  
**Paper Title** ASSESSMENT REPORT FOR MODIFICATION PROPOSAL P213 'FACILITATING MICROGENERATION (OPTIONAL SINGLE MPAN)'  
**Purpose of Paper** For Decision

---

## **1. PROPOSED MODIFICATION**

1.1. Proposed Modification P213 seeks to amend the current provisions for Non Half Hourly (NHH) microgeneration to allow a single MPAN<sup>1</sup> to be used for both Import and Export in Non Half Hourly Settlement. The aim of this modification is to reduce the associated industry costs and the complexity of Settlement processes for Suppliers and Supplier Agents, and thereby facilitate increased Settlement of microgeneration Export. Under the Proposed Modification, different Line Loss Factor Classes (LLFCs) could be assigned to the Import and Export for an Import/Export MPAN.

## **2. ALTERNATIVE MODIFICATION**

2.1. Alternative Modification P213 seeks to implement the Proposed P213 Modification as the only method for the NHH settlement of microgeneration Export. The current two NHH MPAN solution introduced by P081 would be removed and participants would be required to register NHH Import and Export together under one MPAN. As for the Proposed Modification, this Alternative does not seek to remove the option of not settling microgeneration Export, or using a Half Hourly (HH) meter to settle Export. This Alternative Modification seeks to remove the complexity of the Settlement processes for MPANs moving between the P081 and P213 solutions.

## **3. RECOMMENDATIONS**

**3.1. Having considered, and taken into due account, the contents of the P213 Assessment Report, the Panel is invited to:**

- a) NOTE the P213 Assessment Report and the recommendations of the P213 Modification Group;**
- b) AGREE a provisional recommendation that Proposed Modification P213 should not be made;**
- c) AGREE a provisional recommendation that Alternative Modification P213 should not be made;**
- d) AGREE a provisional Implementation Date for Proposed Modification P213 of 05 November 2009;**

---

<sup>1</sup> MPAN (Metering Point Administration Number) is the term referred to in the Master Registration Agreement (MRA), which identifies a SVA Metering System and Metering System Identifier, or MSID which is the term used under the BSC. For consistency with the term used in P213, the P213 AR refers to MPANs.

- e) **AGREE a provisional Implementation Date for Alternative Modification P213 of 05 November 2009;**
- f) **AGREE the draft legal text for Proposed Modification P213;**
- g) **AGREE the draft legal text for Alternative Modification P213;**
- h) **AGREE that Modification Proposal P213 be submitted to the Report Phase; and**
- i) **AGREE that the draft Modification Report be issued for consultation and submitted to the Panel for consideration at its meeting of 13 September 2007.**

**Chris Rowell**  
**Modification Secretary**
