

*CP1246 ('A New Interface from BMRS to the ETSOVista Reporting System') requires the following changes to section 4.2.2 of the Communication Requirements Document:*

#### **Low Grade Service Definition**

This provides access to all services and data through the public Internet, with consequently no guarantees on access times or availability.

The Low Grade Service provides access to BMRA data through a browser, but without the automatic refresh, the users are responsible for 'pulling' the data for screen based access and file downloads.

Users accessing the EWS using the Low Grade Service have access to the same services provided via the High Grade Service.

Certain items of BMRA data are also made available through the public Internet to the ETSOVista reporting platform (for republication to participants and stakeholders in the European Union's Internal Electricity Market). The file format and transfer mechanism for this interface are in accordance with specifications maintained by ETSOVista, and are outside the scope of this document.
