

Change Proposal – F40/01 (Page 1 of 1)	CP No: 801 (mandatory by BSCCo)
Title (mandatory by originator) Inappropriate date conversion during data estimation in BSCP502	
Description of Change (mandatory by originator) BSCP502 appendix 4.2 outlines the estimation methods to be applied by HHDCs. The method described in 4.2.1 (e) requires that where the Supplier provides an EAC and a Profile Class Identifier, the Default Period Profile Class Coefficients (DPPCCs) contained in Market Domain Data will be applied to the EAC in order to estimate consumption values. The BSCP wording is unclear on the time units of the DPPCCs and as a result some HHDCs have mistakenly attempted to convert the consumption into another time format. This CP has been raised from SIR R3004.	
Proposed Solution(s) (mandatory by originator) Add a sentence to BSCP502 section 4.2.1 (e) to explain that DPPCCs are defined in clock time (BST during the summer months) and therefore the results of the estimation technique will already be in clock time.	
Justification for Change (mandatory by originator) To avoid confusion on the part of HHDCs using these estimation procedures.	
Other Configurable Items Potentially Affected by Proposed Solution(s) (optional by BSCCo)	
Impact on Core Industry Documents (optional by originator)	
Related Changes and/or Projects (mandatory by BSCCo)
