1 Introduction

1.1 Purpose

1.1.1 Summary

This document is Part 1 of the Interface Definition and Design deliverable that the service provider, ~~EPFAL~~, is committed to deliver to the customer, the central CVA Programme.

The scope of the Interface Definition and Design document is, for the FAA service system, the definition and design of all interfaces between the FAA Service System and other Systems.

The scope of Part 1 is limited to the definition and design of interfaces between the FAA Service System and the BSC Parties and their Agents.

1.2 Scope

1.2.1 Status

This document replaces all previous drafts, taking into account the comments received on version 19 of this document.

This document is being prepared and approved in parallel time scales to the User Requirement Specifications (URS) for the ~~EPFAL~~ provided service. There is some overlap in the scope of these documents with regard to interface definition - note that for a common revision level where there is an identified difference then it is this document which prevails.

~~1.2.2 The Scope of the EPFAL Service Provision~~

~~EPFAL is contracted to provide the Funds Administration service defined as package 4 within the RETA Information To Tender document.~~

1.3 Change Forecast

This specification has been updated to reflect CVA Programme comments and is issued to be formally baselined.

This baseline specification will only be changed via formal change request processes.
