About This Document

This document provides information on new Change Proposal (CP) CP1469 and outlines our proposed progression timetable for this change, including when it will be issued for CP Consultation in the next suitable Change Proposal Circular (CPC) batch.

We are presenting this paper to capture any comments or questions from Supplier Volume Allocation Group (SVG) Members on this CP before we issue it for consultation.

There are five parts to this document:

- This is the main document. It provides a summary of the solution, impacts, anticipated costs, and proposed implementation approach, as well as our proposed progression approach for this CP.
- Attachment A contains the CP1469 Proposal Form.
- Attachments B, C and D contain the proposed redlined changes to deliver the CP1469 solution.

1 Why Change?

Settlement Reform Advisory Group recommendations

The Settlement Reform Advisory Group (SRAG) identified a number of changes required to facilitate elective Half Hourly (HH) Settlement for Data Communications Company (DCC) enrolled smart Meters.

The SRAG report was presented to the BSC Panel in February 2016 ([BSC Panel 249/13A](#)). The BSC Panel noted that changes would be raised to progress the SRAG recommendations, including this CP.

What are the issues?

Currently, there are no Settlement processes set out under the BSC for elective HH smart Meters. Therefore, changes to [BSC Procedure \(BSCP\) 502 'Half Hourly Data Collection for SVA Metering Systems registered in SMRS'](#) are required to set out the processes for Suppliers to send HH data from DCC enrolled smart Meters to Half Hourly Data Collectors (HHDCs).

The existing data flows for transferring HH data hold HH values to the nearest 100Wh ([D0275 'Validated Half Hourly Advances'](#) and [D0036 'Validated Half Hourly Advances for Inclusion in Aggregated Supplier Matrix'](#) data flows). However, Meters that meet the requirements set out in the SMETS are capable of providing data to the nearest Wh. Therefore, HH data for smaller customers will need to be processed to the nearest Wh. Data flows between the Supplier and the HHDC will need to reflect this greater precision, as will the data flow between the HHDC and the Half Hourly Data Aggregator (HHDA). Therefore, changes are also required to [BSCP503 'Half Hourly Data Aggregation for SVA Metering Systems registered in SMRS'](#).¹

The SRAG also recommended further clarification of data validation and revisions to data estimation processes for smart Meters where initial estimates are required, or for the replacement of invalid data. For estimation purposes, Market Domain Data (MDD) will need to include new Default Period Profile Class Coefficients (DPPCCs) for Profile Classes 2 'Domestic Economy 7' and 4 'Non-Domestic Economy 7'.

Further changes are required to inform the HHDC of the Supplier's Meter reading schedule (i.e. when to expect HH consumption data) and to allow the Suppliers to send a cumulative register read to the Licenced Distribution System Operator (LDSO).

Another SRAG recommendation was to remove the requirement for Proving Tests (a test that shows the HH data at the Meter matches that collected by the HHDC) where HH data is being retrieved by the Supplier (or service provider) from Meters that are compliant with the Smart Metering Equipment Technical Specifications (SMETS). Changes are needed to the Proving Test requirements in BSCP502 and [BSCP514 'SVA Meter Operations for Metering Systems Registered in SMRS'](#).

¹ This CP, CP1469, supersedes the earlier [CP1464 'Requiring HH consumption data to be processed to appropriate precision'](#) which will be recommended for rejection at the September meeting of the SVG. The alternative solution presented in this CP, CP1469, takes into account the responses to the C1464 consultation.

Proposed solution

ELEXON raised [CP1469 'Changes to support the implementation of the SRAG's recommendations'](#) on 19 July 2016. This CP proposes to implement the SRAG recommendations for the elective HH Settlement of DCC enrolled smart Meters.

The new processes introduced by this CP will apply where:

- Meters are compliant with the SMETS; and
- HH data is sourced by the Supplier, rather than the HHDC, using the DCC or a Smart Metering System Operator (SMSO).

The changes set out in this CP will introduce new processes for getting smart Meter data from the Supplier to the HHDC. The validation and estimation requirements are also defined under this CP for smart Meters.

CP1469 also gives the Supplier the option of sending the unprocessed HH smart Meter data to the HHDC with sufficient additional information required to process the data into the [D0036 'Validated Half Hourly Advances for inclusion in Aggregated Supplier Matrix'](#) data flow. If this option is used, the Supplier will have to make their own arrangements for getting the HH consumption data to the HHDC from the participant collecting the data (e.g. this could be from an SMSO or a Half Hourly Meter Operator Agent (HHMOA)).

The requirements for Proving Tests for smart Meters are also being removed by the proposed redlining.

Related Data Transfer Catalogue changes

The related Data Transfer Catalogue (DTC) changes (DTC CP 3496 'DTC changes to support the implementation of the Settlement Reform Advisory Group's (SRAG) recommendations') have been raised to create optional new data flows for the transfer of elective HH data. This data will be declared to the nearest Wh. These changes also include allowing the Supplier to send either validated or non-validated HH Meter data to its appointed HHDC. A new 'Supplier Validated Flag' will be created for this purpose. These data flows will be variants of the [D0275 'Validated Half Hourly Advances'](#) and the [D0036 'Validated Half Hourly Advances for Inclusion in Aggregated Supplier Matrix'](#) data flow. The proposed changes to the BSCPs reflect the details of the proposed DTC changes.²

A new value will be added to the valid set for 'Retrieval Method' in the [D0155 'Notification of Meter Operator or Data Collector Appointment and Terms'](#) data flow. The Supplier will use this to notify the HHDC that HH data will be sourced by the Supplier. The existing 'Regular Reading Cycle' data item will inform the HHDC of the frequency with which it will receive the HH data.

There is also a proposed DTC change (also part of DTC CP 3496) to allow a cumulative register read to be sent from the Supplier to the LDSO using the [D0010 'Meter Readings'](#) data flow. The LDSO needs Metering System level consumption data as they will only receive aggregated HH consumption data from the Settlement processes.

² The redlining to BSCP502 may require minor changes depending upon the finalised change to the DTC following consultation.

There is a requirement to hold new DPPCCs for Profile Classes 2 and 4 in MDD. These will be used as a backstop for estimating initial consumption data or for estimation where data is missing or invalid. These new DPPCCs will only be used to estimate data for MSIDs in Profile Classes 2 and 4, as notified by the Supplier to the HHDC on the [D0289 'Notification of MC/EAC/PC'](#) data flow. This will occur when customers, who were formerly in Profile Classes 2 or 4, have moved to elective HH Settlement or for new registrations of customers with similar characteristics. This will cause a small increase in the size of the [D0269 'Market Domain Data Complete Set'](#) and [D0270 'Market Domain Data Incremental Set'](#) data flows. The new DPPCCs will be effective from 1 April 2017, and will be progressed through the MDD change process.

Rationale

We have raised CP1469 at the recommendation of the SRAG. The full SRAG report can be found in the SRAG's report to the Panel ([Panel 249/13A](#)).

The proposed changes are required to remove barriers to the elective HH Settlement of data from smart Meters. Ofgem is keen to remove these barriers by early 2017.

Proposed redlining

Attachments B, C and D contain the proposed changes to BSCP502, BSCP503 and BSCP514 respectively to deliver CP1469.

3 Impacts and Costs

Central impacts and costs

CP1469 will require changes to BSCP502, BSCP503 and BSCP514. No central system changes are required and there will be no impact on BSC Agents.

The central implementation costs for CP1469 will be approximately £240 to implement the proposed document changes.

Central Impacts	
Document Impacts	System Impacts
<ul style="list-style-type: none">• BSCP502• BSCP503• BSCP514	None

BSC Party & Party Agent impacts and costs

The proposed changes to BSCP502, BSCP503 and BSCP514 are document changes only but will place new obligations on Suppliers, LDSOs, HHDCs, HHDAAs and HHMOAs.

The DTC changes will require Suppliers, their Agents³ and LDSOs to amend/build their systems appropriately to process new or amended data flows.

BSC Party & Party Agent Impacts	
BSC Party/Party Agent	Impact
Suppliers	System and process changes will be required to allow Suppliers to process HH and cumulative consumption data from DCC enrolled smart Meters
Supplier Agents	System and process changes will be required to allow Supplier Agents to process HH data from DCC enrolled smart Meters and to implement new Proving Test rules
Licensed Distribution System Operator	System and process changes will be required to enable LDSOs to receive cumulative register readings from Suppliers rather than HHDCs for applicable Metering Systems

³ Supplier 'Agents' could include other service providers that collect and process data from SMETS1 (foundation) Meters such as SMSOs.

4 Implementation Approach

Recommended Implementation Date

CP1469 is proposed for implementation on **29 June 2017**, as part of the June 2017 BSC Systems Release (which allows for the interaction and lead times for the associated DTC changes and changes to Supplier, LDSO and Supplier Agent systems).

This Implementation Date is proposed to meet the expectations of Ofgem on the progression of changes relating to elective HH Settlement, as set out in the Ofgem [‘Elective half-hourly Settlement conclusions paper’](#).

5 Proposed Progression

Progression timetable

The table below outlines the proposed progression plan for CP1469:

Progression Timetable	
Event	Date
CP Progression Paper presented to SVG for information	02 Aug 16
CP Consultation	08 Aug 2016 – 02 Sep 16
CP Assessment Report presented to SVG for decision	04 Oct 16
Proposed Implementation Date	29 Jun 17 (Jun 17 Release)

CP Consultation questions

We intend to ask the standard CP Consultation questions for CP1469. We do not believe any additional questions need to be asked for this CP.

Standard CP Consultation Questions
Do you agree with the CP1469 proposed solution?
Do you agree that the draft redlining delivers the CP1469 proposed solution?
Will CP1469 impact your organisation?
Will your organisation incur any costs in implementing CP1469?
Do you agree with the proposed implementation approach for CP1469?

6 Recommendations

We invite you to:

- **NOTE** that CP1469 has been raised;
- **NOTE** the proposed progression timetable for CP1469; and
- **PROVIDE** any comments or additional questions for inclusion in the CP Consultation.

Appendix 1: Glossary & References

Acronyms

Acronyms used in this document are listed in the table below.

Acronyms	
Acronym	Definition
BSC	Balancing and Settlement Code (<i>Industry Code</i>)
BSCP	BSC Procedure
CP	Change Proposal
CPC	Change Proposal Circular
DCC	Data Communications Company
DECC	Department of Energy and Climate Change
DPPCC	Default Period Profile Class Coefficient
DTC	Data Transfer Catalogue
HH	Half Hourly
HHDA	Half Hourly Data Aggregator
HHDC	Half Hourly Data Collector
HHMOA	Half Hourly Meter Operator Agent
LDSO	Licensed Distribution System Operator
MDD	Market Domain Data
SMETS	Smart Metering Equipment Technical Specifications
SMSO	Smart Metering System Operator
SRAG	Settlement Reform Advisory Group
SVG	Supplier Volume Allocation Group (<i>Panel Committee</i>)

DTC data flows and data items

DTC data flows and data items referenced in this document are listed in the table below.

DTC Data Flows and Data Items	
Number	Name
D0010	Meter Readings
D0036	Validated Half Hourly Advances for inclusion in Aggregated Supplier Matrix
D0155	Notification of Meter Operator or Data Collector Appointment and Terms
D0269	Market Domain Data Complete Set
D0270	Market Domain Data Incremental Set
D0275	Validated Half Hourly Advances
D0289	Notification of MC/EAC/PC
