

Change Proposal – BSCP40/02	CP No:1481 <i>Version No: 1.0</i> <i>(mandatory by BSCCo)</i>
Title (mandatory by originator) Housekeeping Change to BSCP536 following approval of P339	
Description of Problem/Issue (mandatory by originator) After approval of the P339 and the corresponding redlining, an error in the redlining to BSCP536 ‘Supplier Charges’ was identified. The approved redlined changes to BSCP536 incorrectly re-defined a definition to include both Active Export and Active Import, where it was previously only Active Import. The intent of P339 was not to change the definition but simply to remove the references to specific CCC IDs. There will be no change to the calculation of Supplier Charges.	
Proposed Solution (mandatory by originator) CP1481 proposes to include the word ‘Active Import’ in the redlining for BSCP536.	
Justification for Change (mandatory by originator) CP1481 proposes to amend this manifest error to avoid any confusion.	
To which section of the Code does the CP relate, and does the CP facilitate the current provisions of the Code? (mandatory by originator) BSC Section D ‘BSC Cost Recovery and Participation Charges’	
Estimated Implementation Costs (mandatory by BSCCo) £240	
Configurable Items Affected by Proposed Solution(s) (mandatory by originator) BSCP536 ‘Supplier Charges’	
Impact on Core Industry Documents or System Operator-Transmission Owner Code (mandatory by originator) None.	
Related Changes and/or Projects (mandatory by BSCCo) P339 ‘Introduction of new Consumption Component Classes for Measurement Classes E-G’	
Requested Implementation Date (mandatory by originator) 1 April 2017	

Reason:

To align with the Implementation Date of P339.

Version History (mandatory by BSCTCo)

Version 1.0 was raised by ELEXON on 14 December 2016.
